

# Prediction of life expectancy and healthy life years in Sweden 2010 – 2040 using microsimulation

Mårten Lagergren  
12-05-08

# Three hypotheses regarding connection between future length of life and health among the elderly

		Present situation
		Compression of morbidity
		Expansion of morbidity
		Postponement of morbidity(dynamic equilibrium)

Healthy years

Years with ill-health

# Healthy Life Years (HLY),

- HLY, the expected length of life in health, has been denoted by the European Commission as the structural indicator of health to be used in comparisons between EU-countries.
- HLY can be calculated using prevalence of ill-health per age-group according to a representative population study (the Sullivan method).
- The result will depend on which indicator of ill-health that is used.

# Aim of study

- To calculate HLE according to different measures of ill-health
- To calculate added life-years in the period 2010 - 2040 divided between health and ill-health

# Material and method

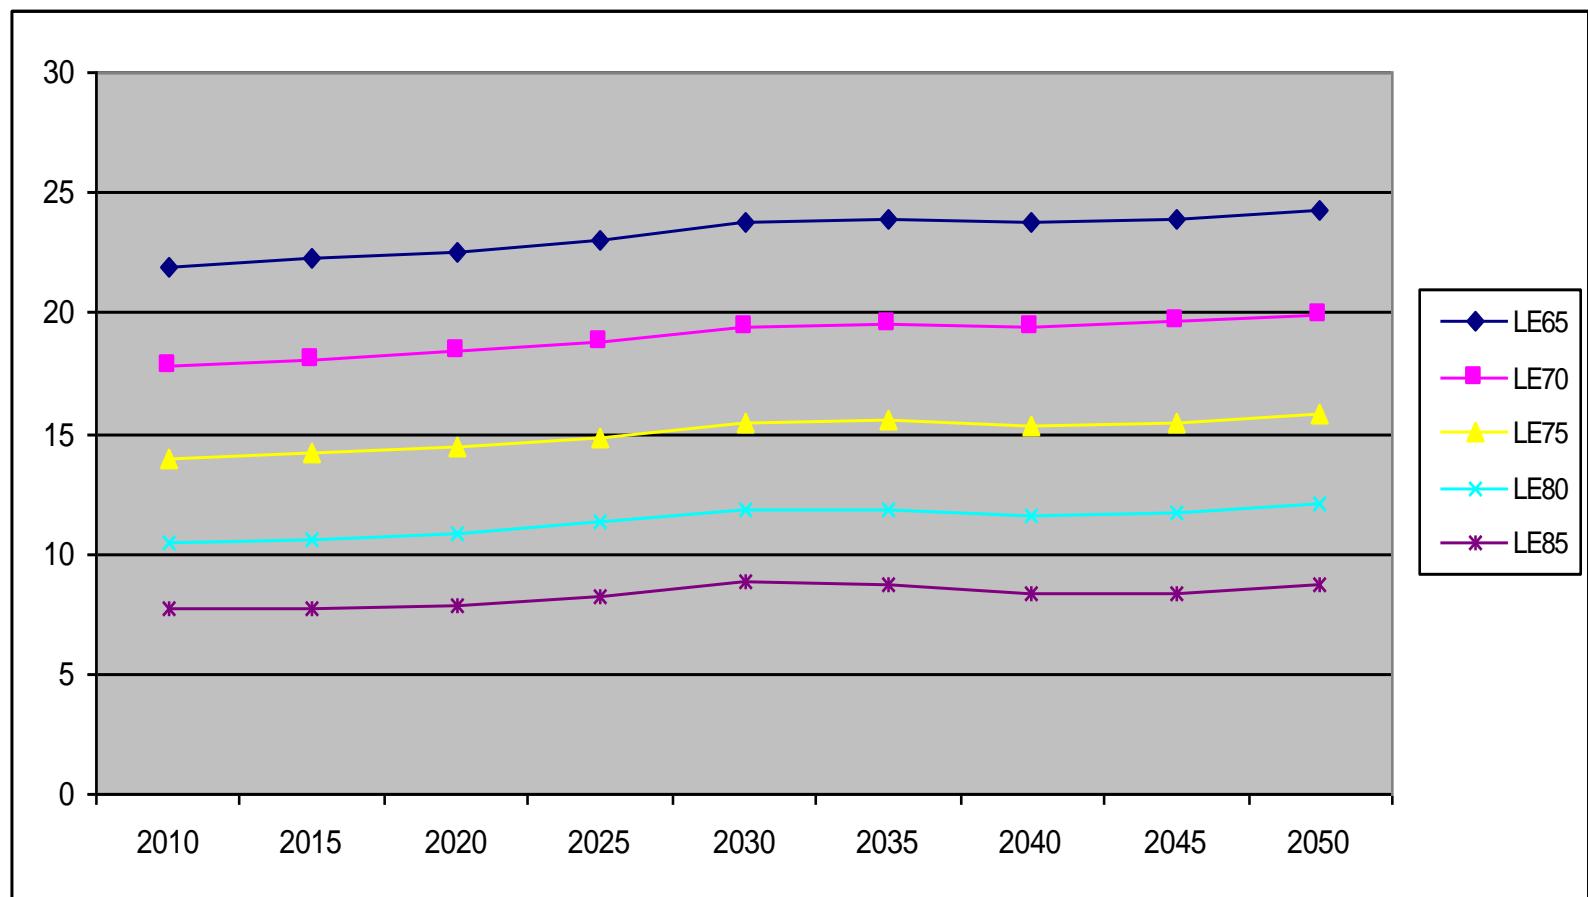

- HLY was calculated by the Sullivan method
- Prevalence predictions from SESIM microsimulation model with estimations based on observed data in the Swedish Survey of Living Conditions (ULF) and the SNAC-study.

# Prevalences of ADL-dependency and dementia 2010 - 2040 as predicted by the SESIM model

	ADL-dependency			Dementia			ADL-dependency <i>and</i> dementia		
	2010	2025	2040	2010	2025	2040	2010	2025	2040
<b>Men</b>									
65 – 69	3,9	3,9	4,0	2,1	2,1	1,8	0,8	0,7	0,7
70 – 74	7,6	8,1	8,4	9,8	7,9	7,8	3,9	3,4	3,4
75 – 79	15,5	15,5	16,4	16,3	15,1	15,3	9,1	9,4	9,5
80 – 84	22,7	22,2	24,5	22,3	21,1	22,9	13,5	14,9	16,0
85+	33,7	35,2	32,9	29,6	28,9	26,2	22,4	24,2	21,3
<b>Women</b>									
65 – 69	6,8	6,7	6,8	2,3	2,3	2,3	0,8	1,1	1,1
70 – 74	9,9	10,9	9,3	11,3	9,5	8,4	3,4	3,6	3,4
75 – 79	21,0	18,0	17,6	19,8	17,0	17,4	10,6	8,6	7,1
80 – 84	32,0	31,0	28,7	28,6	28,0	27,2	19,6	18,6	16,0
85+	44,8	45,5	44,2	37,9	37,8	32,0	29,6	30,7	26,4

# Life expectancy, years from 65, ..., 85

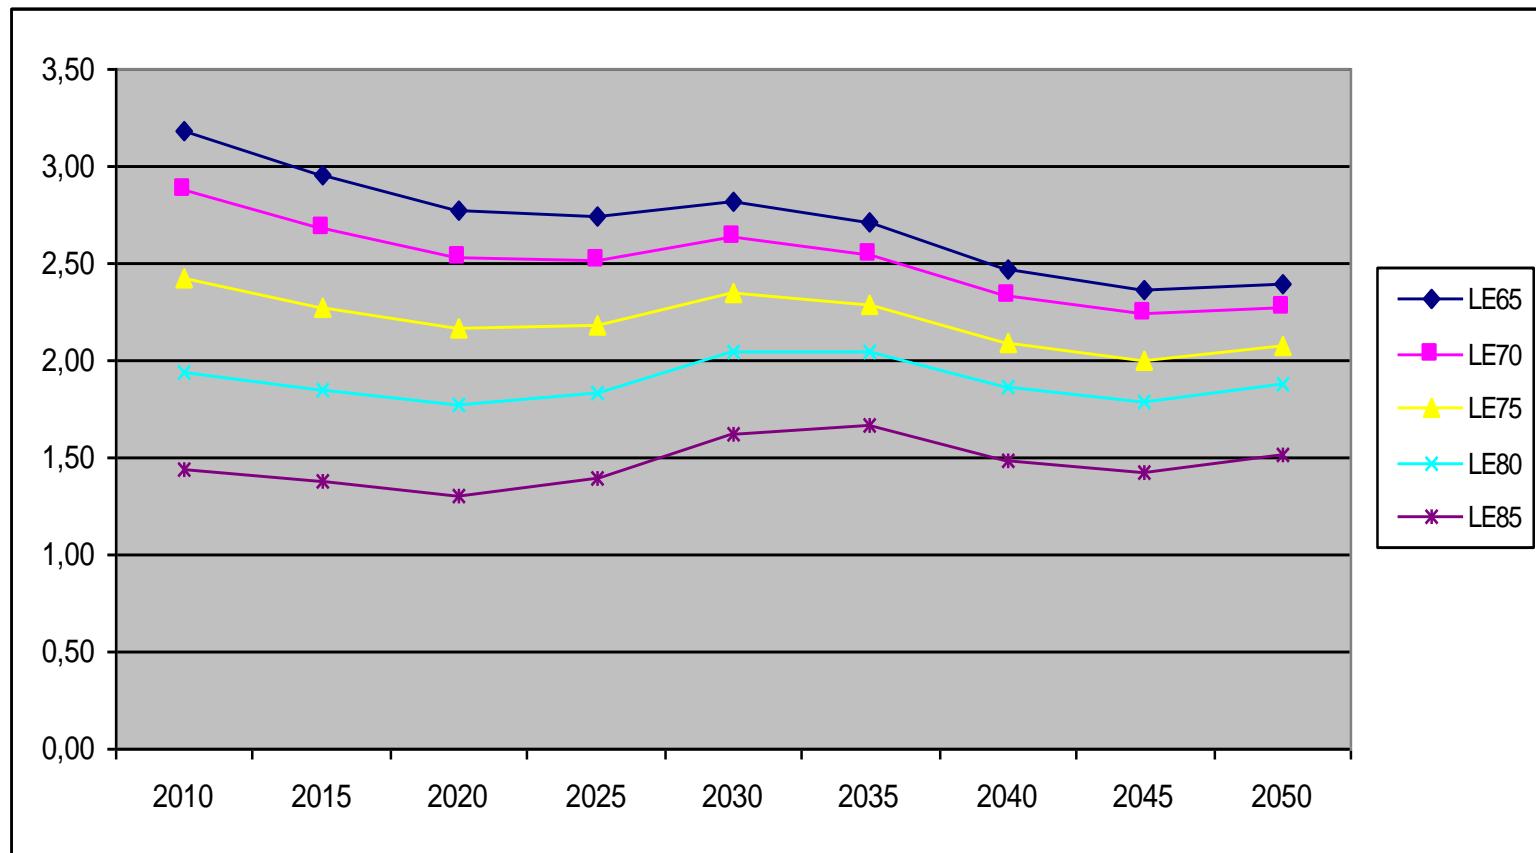

## women, 2010- 2040

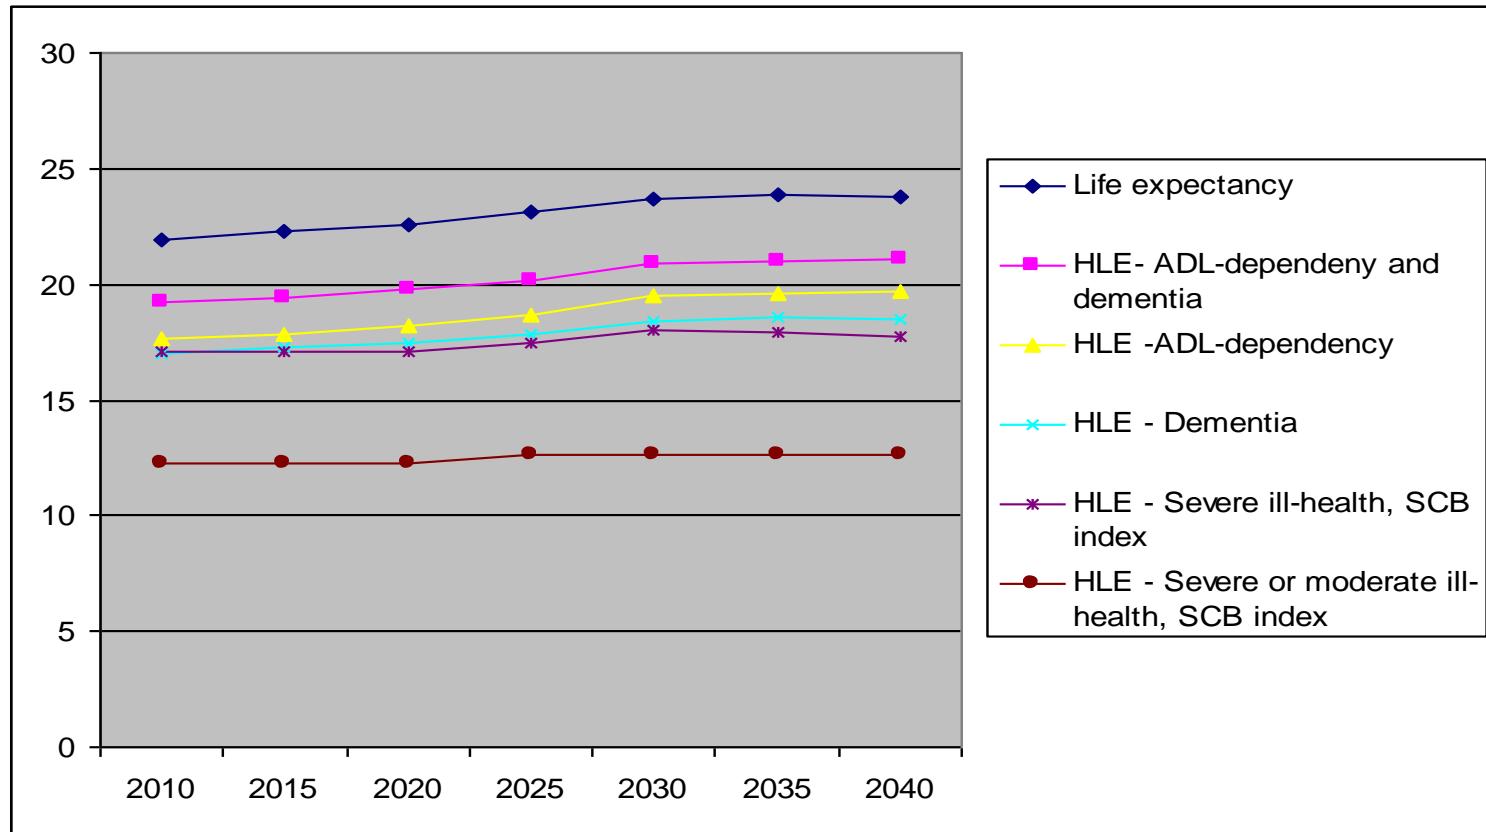

# Life expectancy, years from 65, ..., 85 men, 2010- 2040

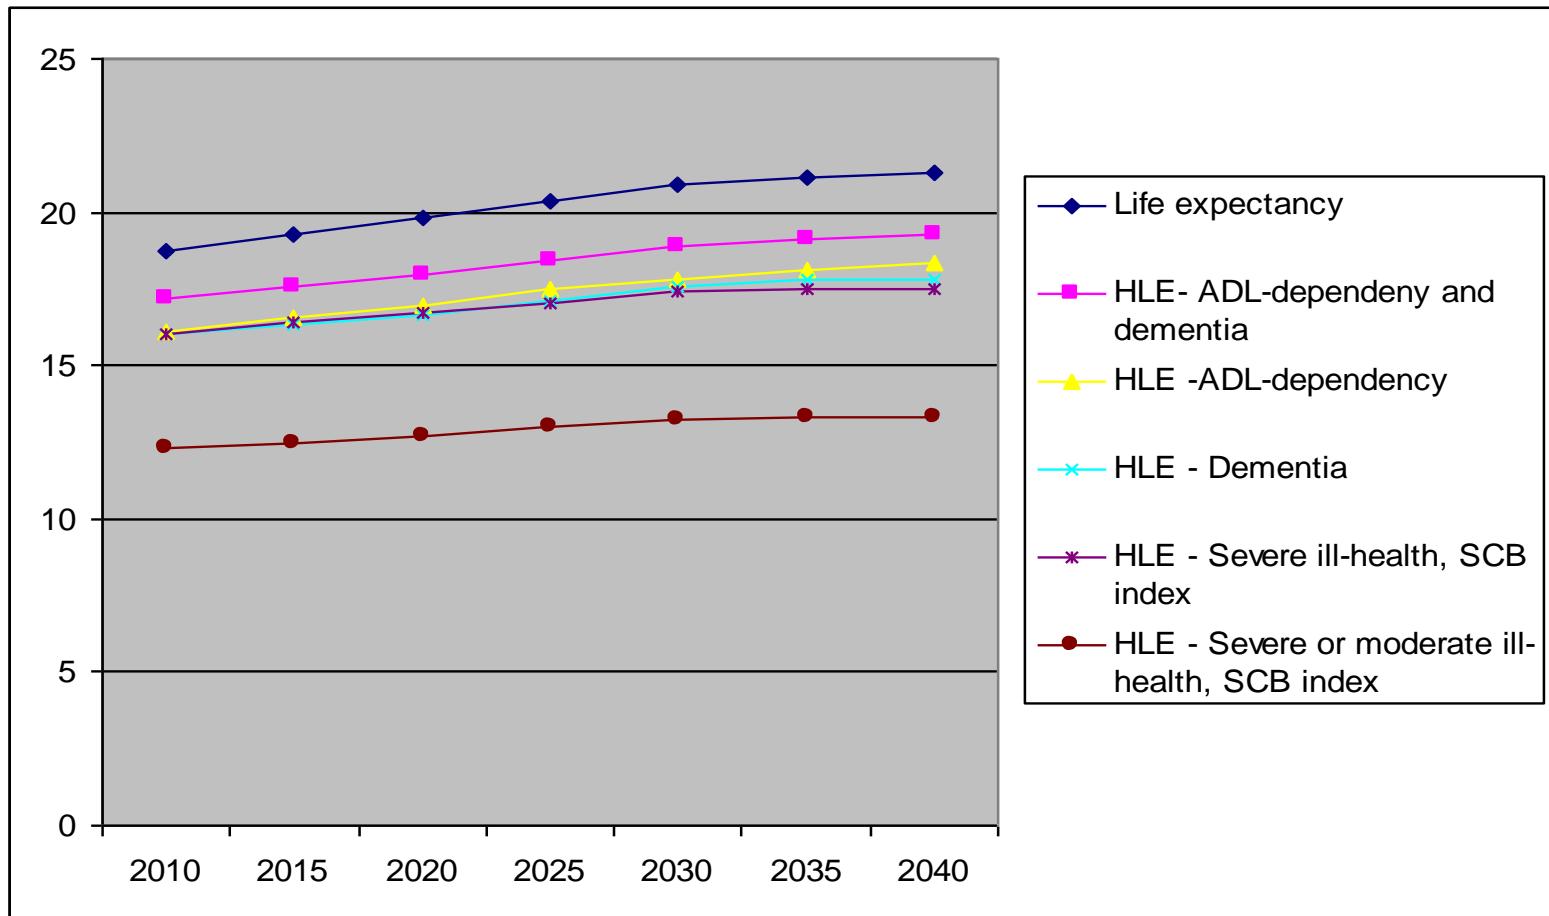

# Gender gap in life expectancy from 65, ..., 85 years 2010- 2040

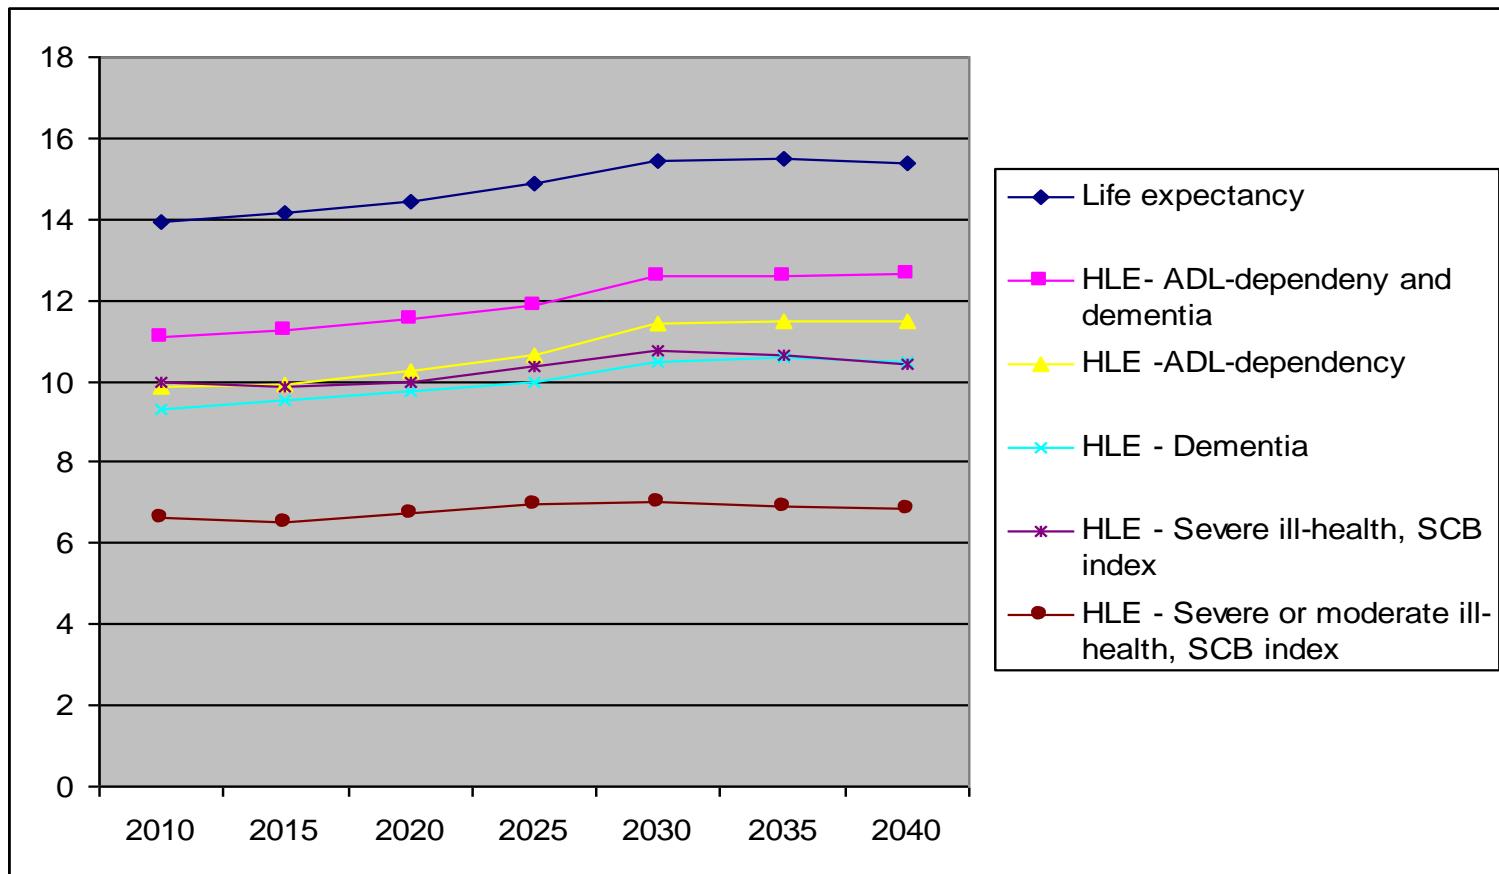

# Life expectancy and healthy life expectancy from 65 according to different ill-health definitions, women 2010- 2040

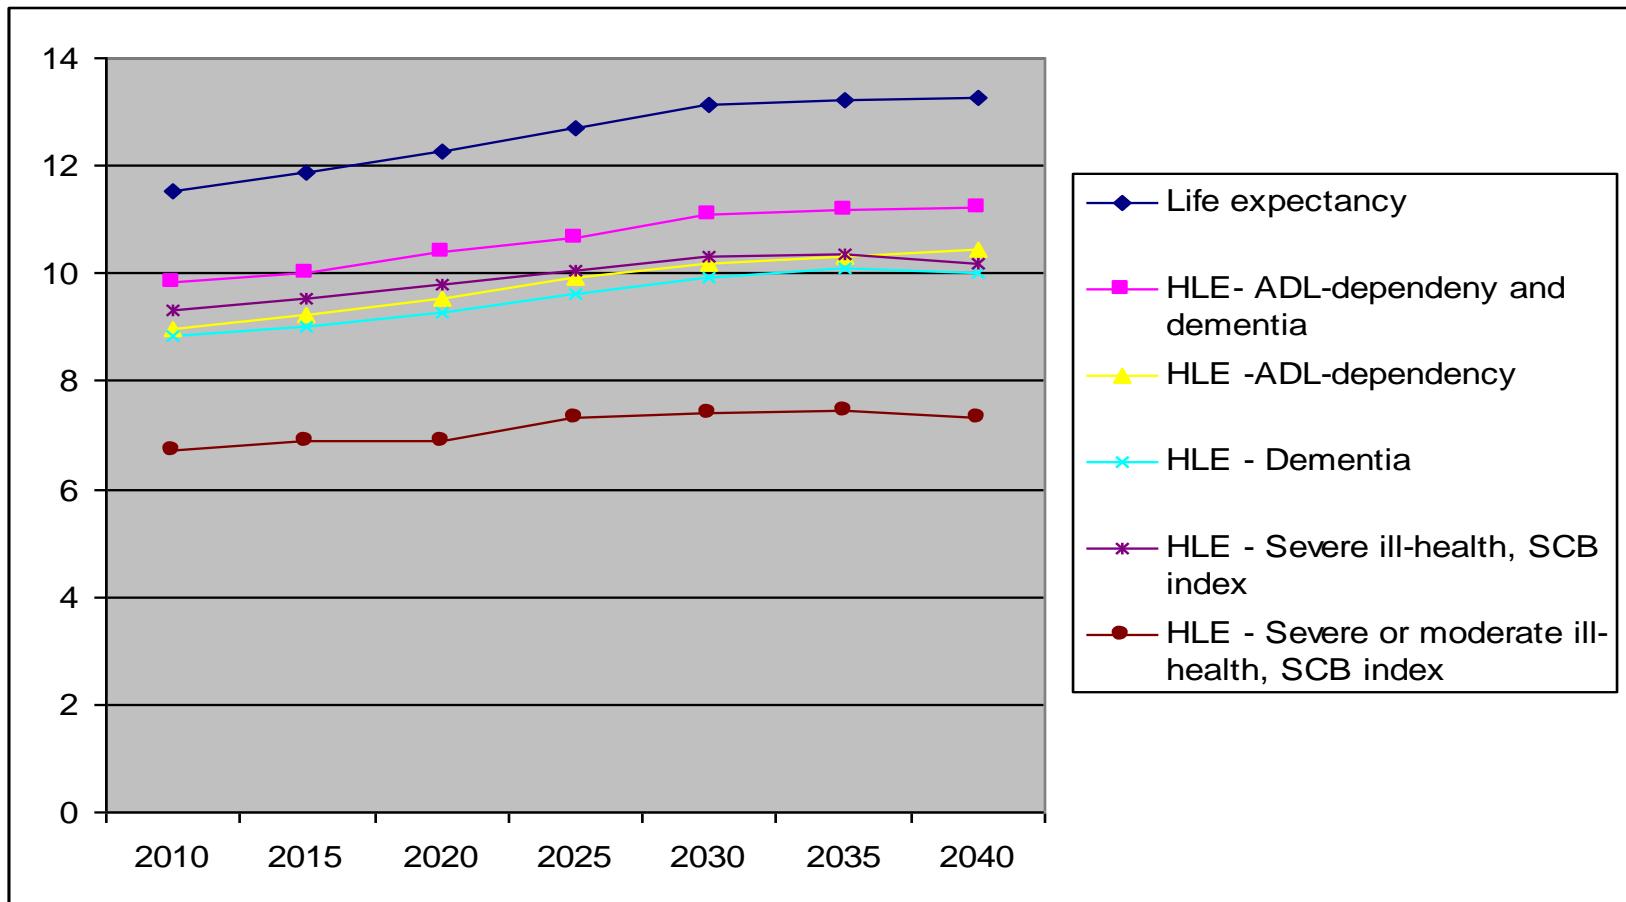

# Life expectancy and healthy life expectancy from 65 according to different ill-health definitions, men 2010- 2040

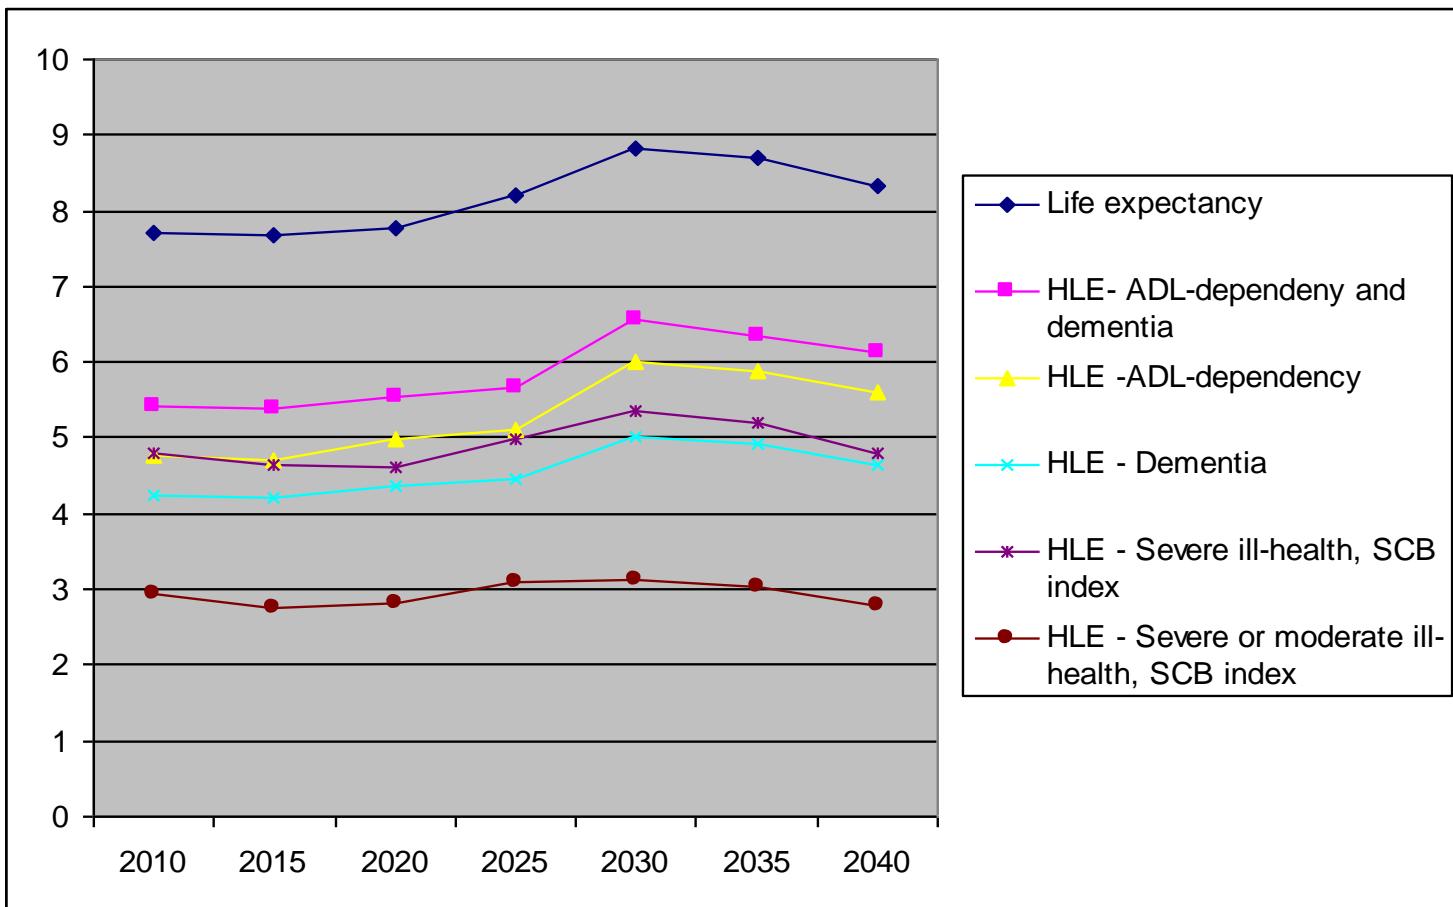

# Life expectancy and healthy life expectancy from 75 according to different ill-health definitions, women 2010- 2040

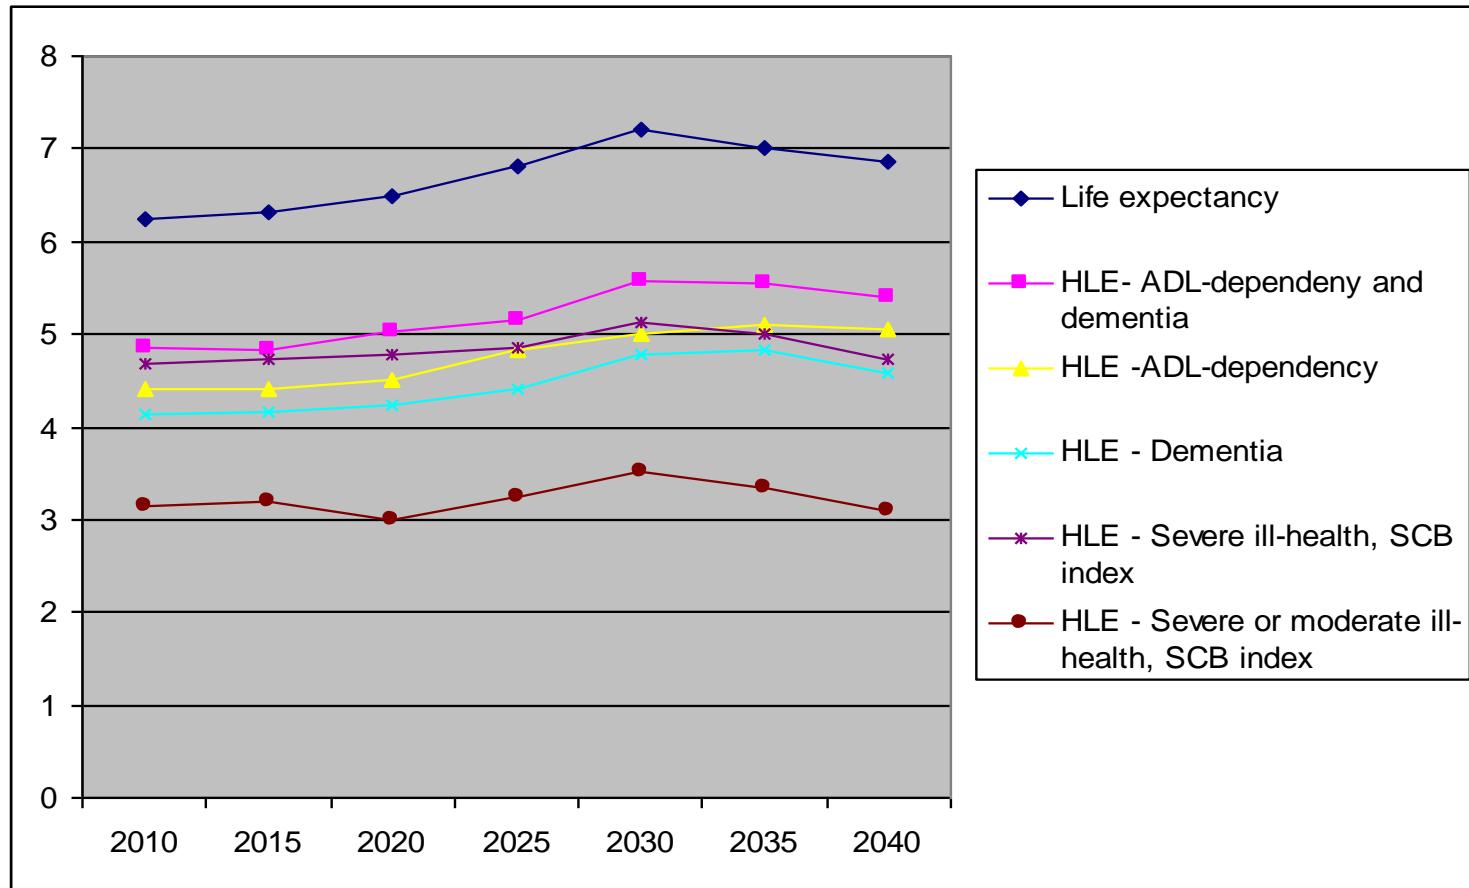

# Life expectancy and healthy life expectancy from 75 according to different ill-health definitions, men 2010- 2040

# Life expectancy and healthy life expectancy from 85 according to different ill-health definitions, women 2010- 2040

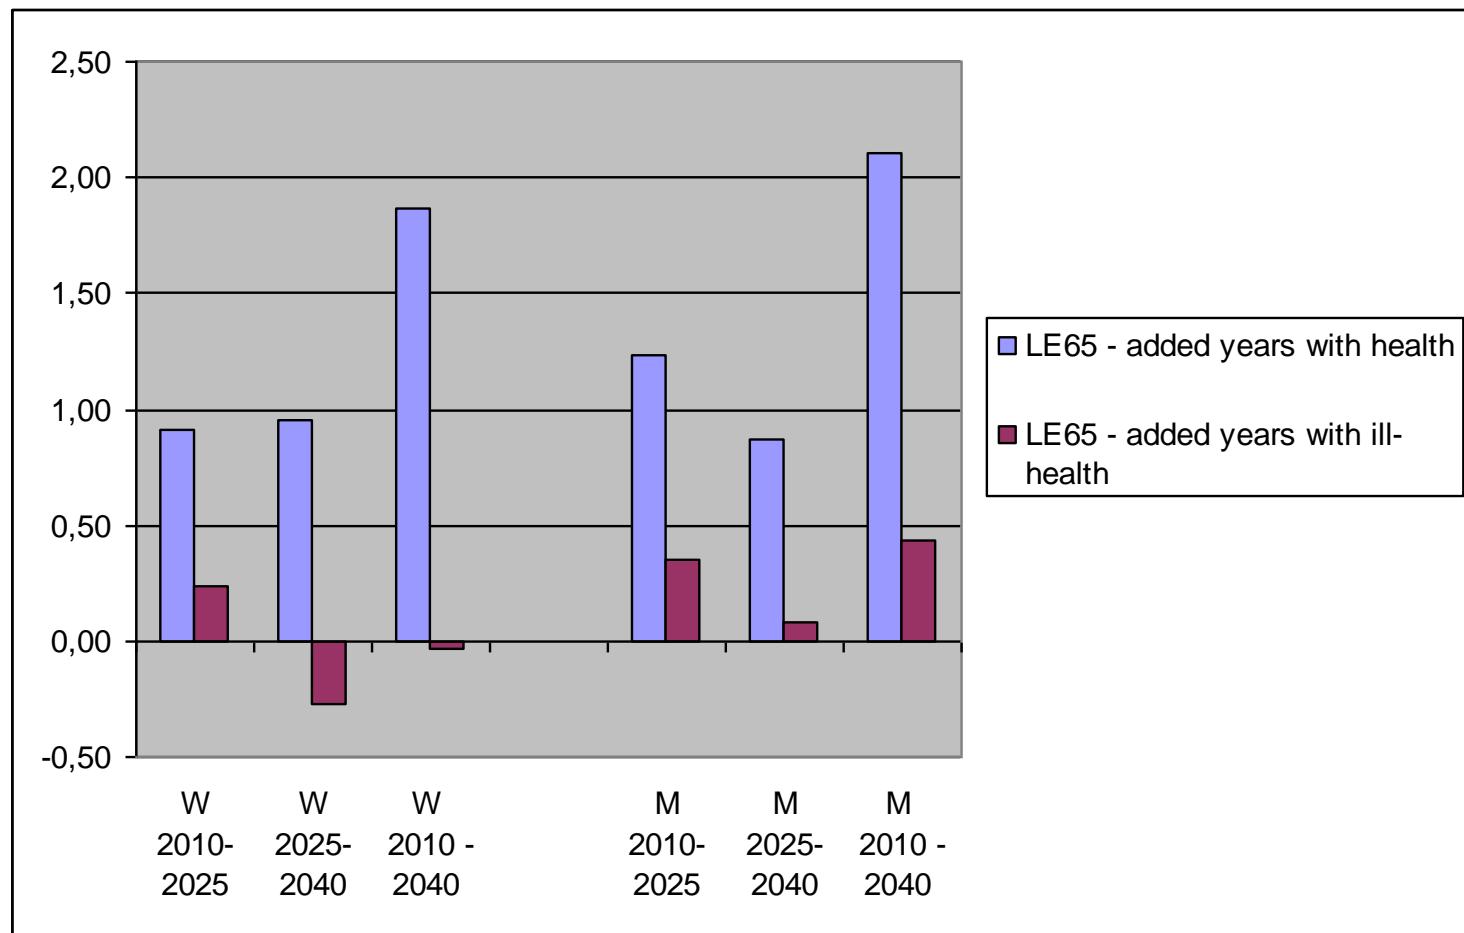

# Life expectancy and healthy life expectancy from 85 according to different ill-health definitions, men 2010 - 2040

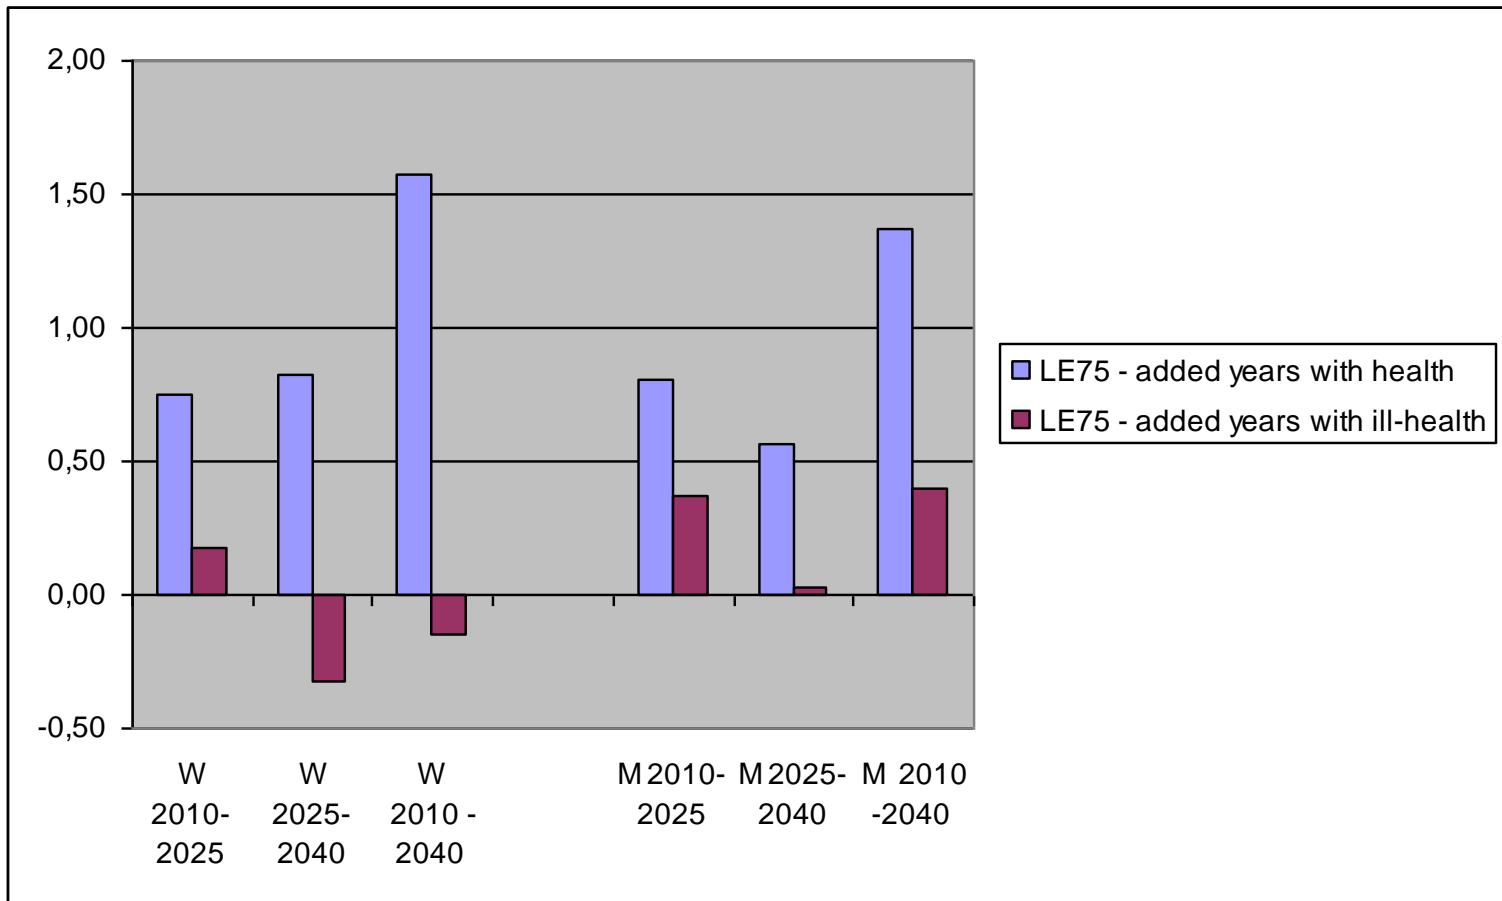

# Added years of life from 65 by period

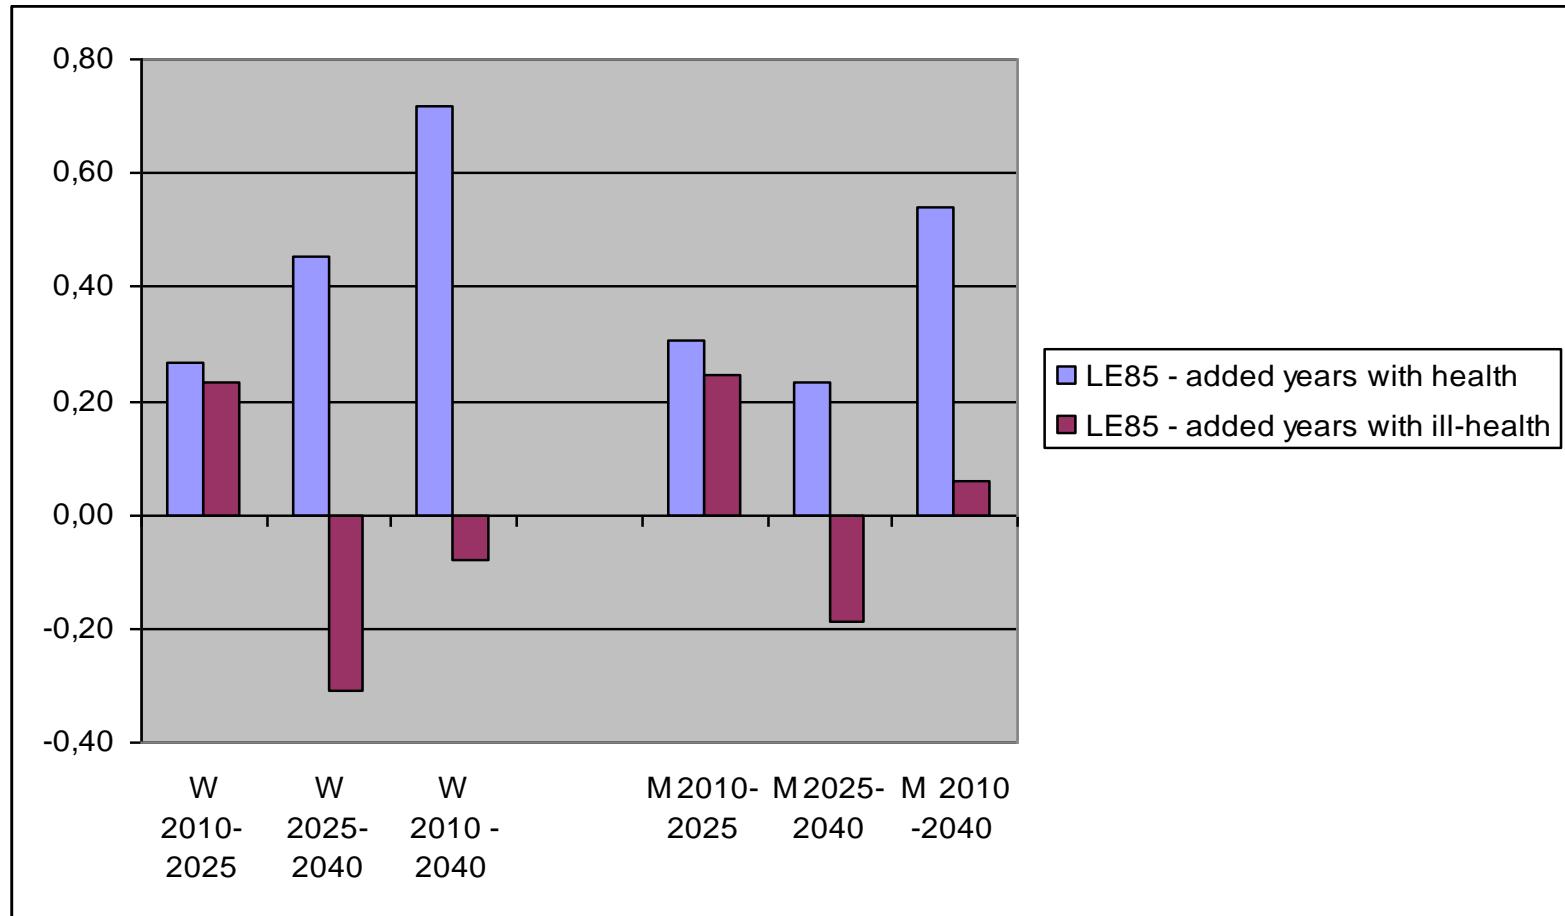

## ill-health defined as ADL-dependent and dementia

# Added years of life from 75 by period ill-health defined as ADL-dependent and dementia

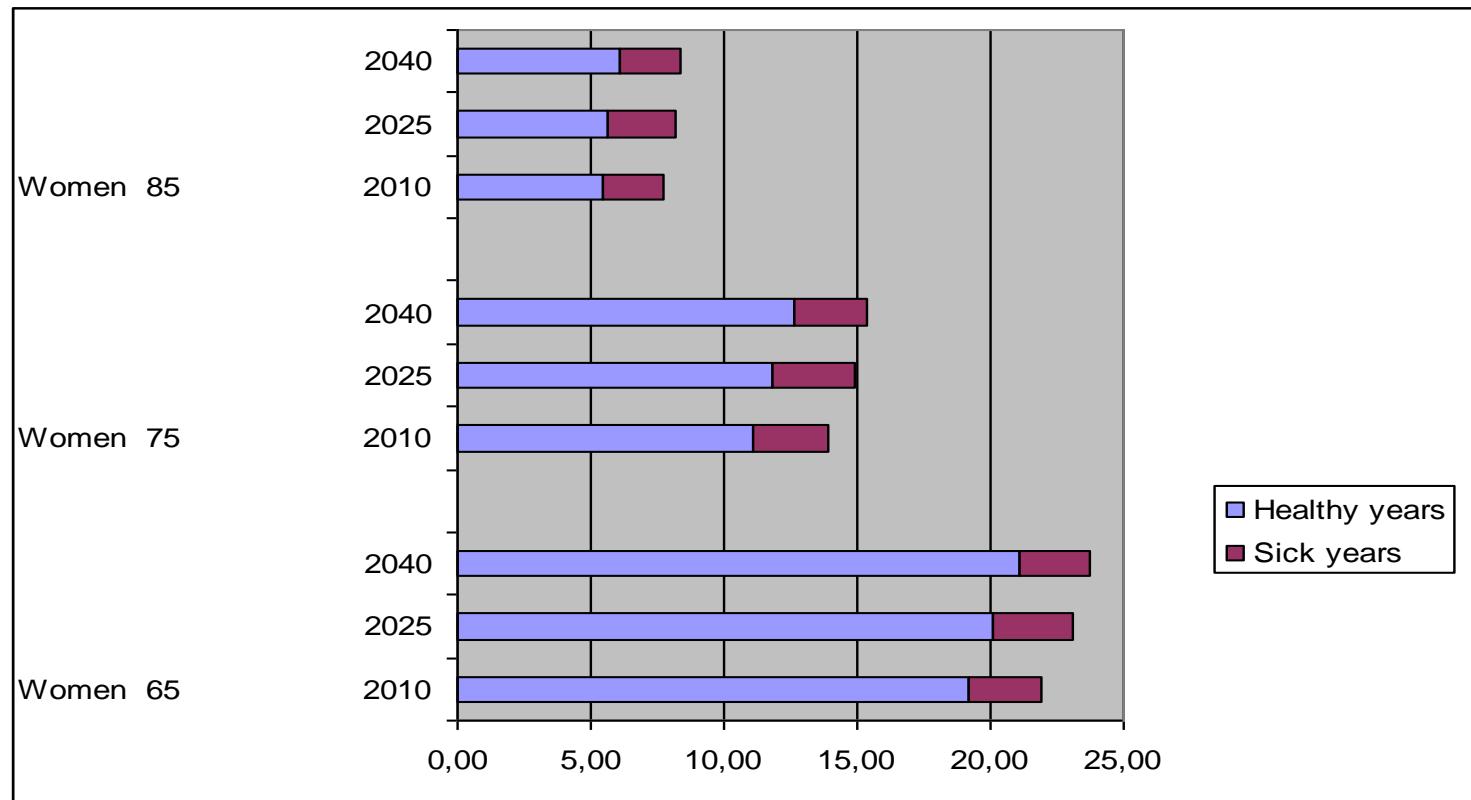

# Added years of life from 85 by period ill-health defined as ADL-dependency and dementia

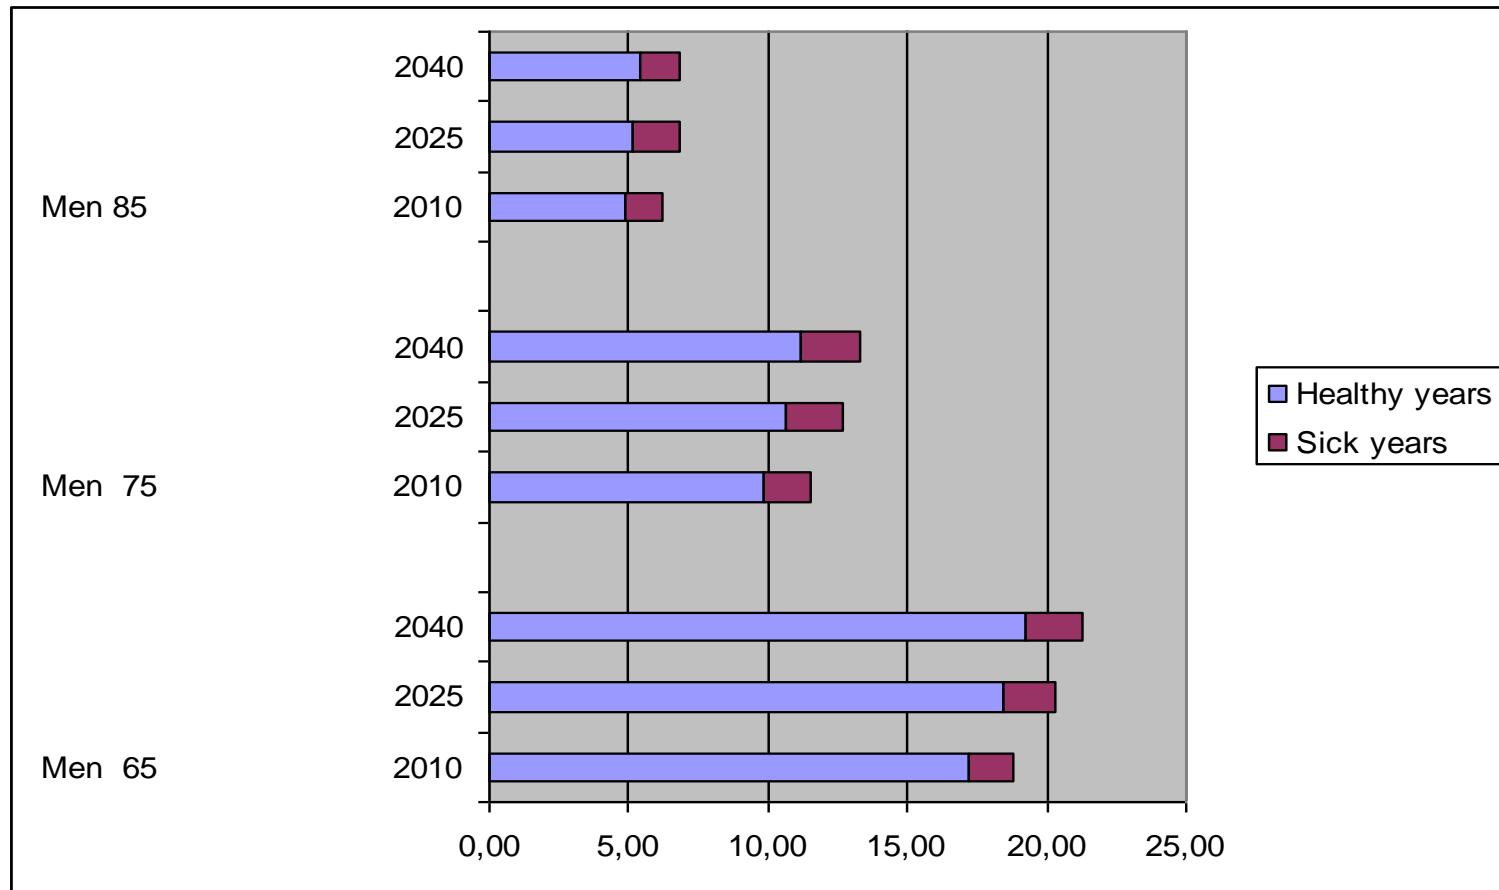

# Expected healthy and sick years of life, women 2010, 2025 and 2040

ill-health defined as ADL-dependency and dementia

# Expected healthy and sick years of life, Men 2010, 2025 and 2040

ill-health defined as ADL-dependency and dementia

That's all  
Thanks for listening
