# South Carolina Alzheimer's Disease Registry

---

# South Carolina Demographics

---

- *South Carolina has about 4 million residents.*
- *About 858,000 were age 55 or over in 2000, with about 50,000 of these age 85 or older.*
- *Almost all older residents are either European American or African American (29.5%).*
- *They have less education than the average older American.*
- *About 40% reside in rural areas.*

# South Carolina Alzheimer's Disease Registry

---

Studies Alzheimer's Disease  
and related disorders.

Since 1988.

One of only two population-  
based state AD registries in  
the United States.

# ADRDs

---

Alzheimer's disease

Vascular dementia

Mixed dementia

(25%-60%) (?)

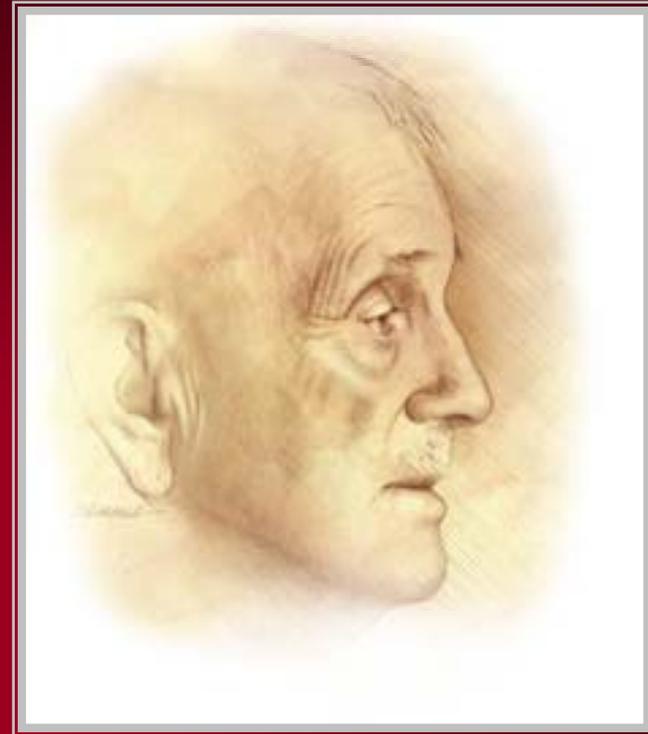

Alcohol-related dementia

Drug-induced dementia

Dementia associated with Parkinson's disease

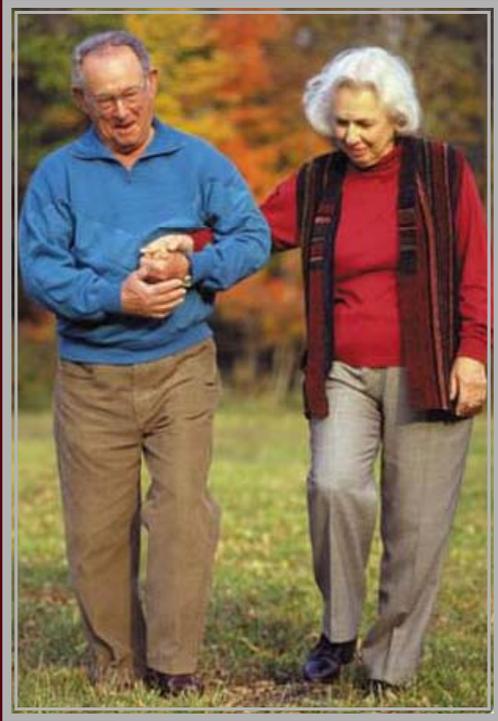

Dementia associated with Huntington's disease

Dementia associated with H.I.V.

# The Impact of AD in the U.S.

---

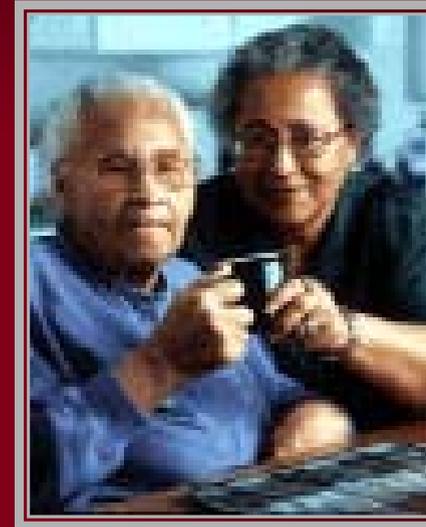

AD is a major public health problem

- About 4.3 million Americans have AD.
- Expect 13.2 million by 2050.
- Hospitalization costs alone are 63% of Medicare costs.
- The national cost of caring for people with AD is about \$100 billion every year.

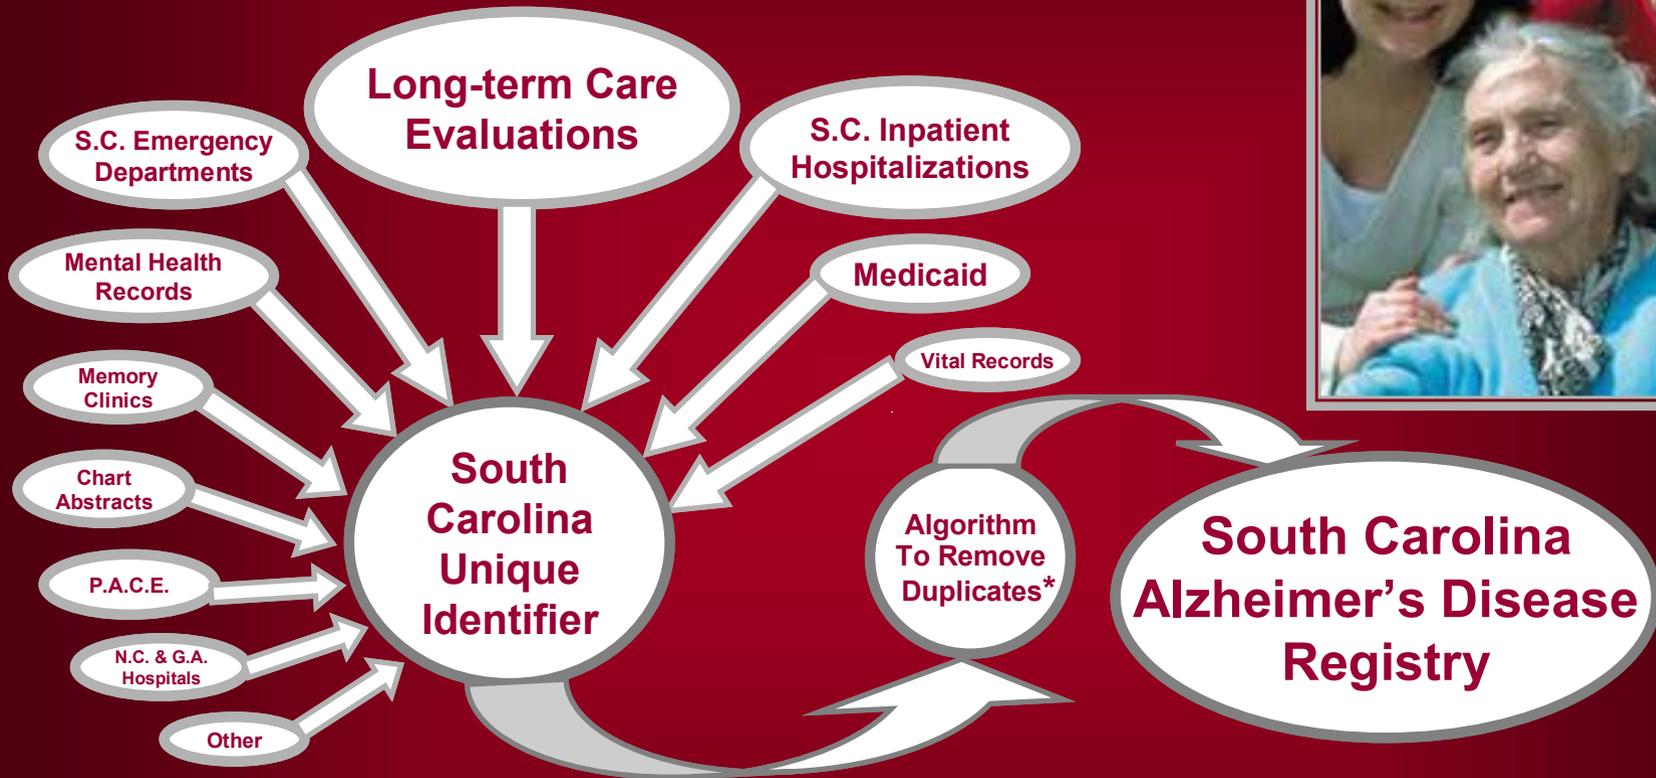

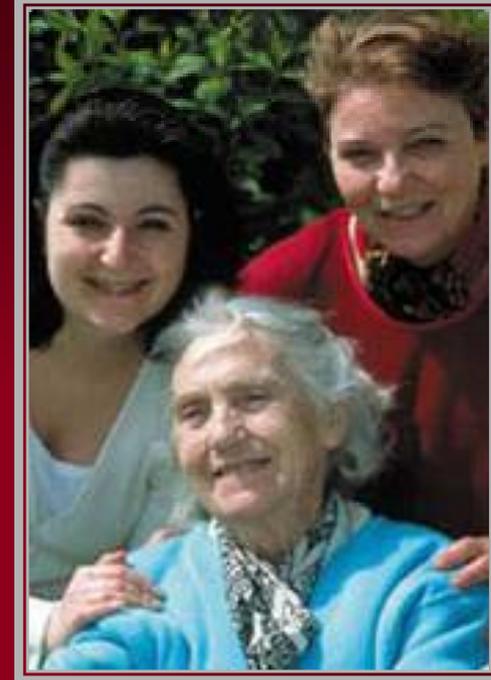

# Risk Factors for ADRD

---

- Advancing Age
- Family History
- Obesity
- Vascular disease & Hypertension
- Diabetes
- Having low educational attainment or quality
- Lack of engagement in social, intellectual, and/or physical activities
- Diets high in fat (especially for ApoE4 individuals), low in fish and/or fruits/vegetables, or low in B vitamins and folates (homocysteine risk)

# Data Sources

**\*Duplicates** occur because individuals sometimes use more than one name, social security number, or other identifying information when using health or social services.

# “True Prevalence?”

---

## The SC Alzheimer's Disease Registry

- Large, population-based
- High “power” for discerning subgroup differences
- Diagnoses by physicians of all specialties (accuracy issue?)
- Will not include MCI
- Will not include cases diagnosed in MD office visits, if not linked to our data sources
- Especially useful for examining prevalence of disease in its most costly stages

## The Rest of the ADRD Epid. World

- Clinical studies, smaller samples
- Low “power” for discerning subgroup differences
- Diagnoses by specialists
- Sometimes include “Mild Cognitive Impairment” (approx. 50%) or “Questionable AD”

# Registry Cases by Dementia Type and Location

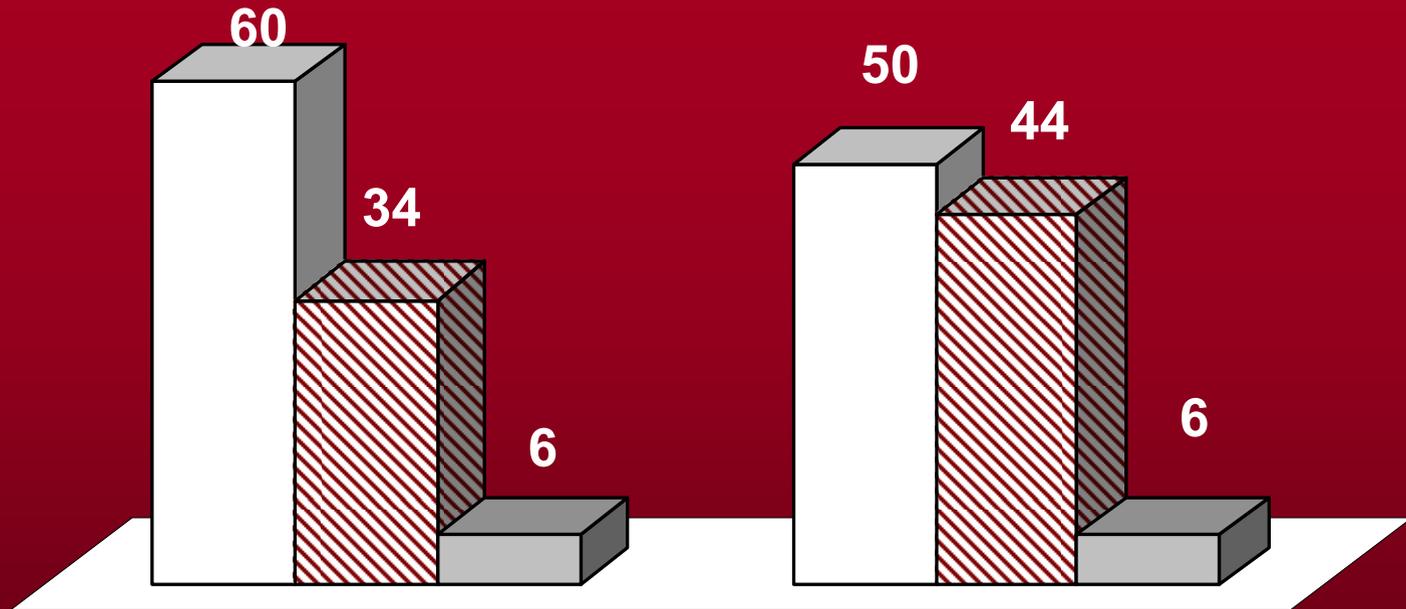

## South Carolina Alzheimer's Disease Registry, 2002

---

<b>Dementia Type</b>	<b>Community N (%)</b>	<b>Nursing Facility N (%)</b>	<b>Unknown N (%)</b>	<b>Total N (%)</b>
<b>Alzheimer's disease</b>	<b>13,803 (60)</b>	<b>10,643 (62)</b>	<b>1,686 (66)</b>	<b>26,132 (61)</b>
<b>Vascular dementia</b>	<b>3,684 (16)</b>	<b>3,306 (19)</b>	<b>185 (7)</b>	<b>7,175 (17)</b>
<b>Other conditions</b>	<b>5,486 (24)</b>	<b>3,292 (19)</b>	<b>673 (27)</b>	<b>9,451 (22)</b>
<b>Total</b>	<b>22,973 (100)</b>	<b>17,241 (100)</b>	<b>2,544 (100)</b>	<b>42,758 (100)</b>

# Where do People with ADRD Live? (Percentages)

---

**African American**

**White**

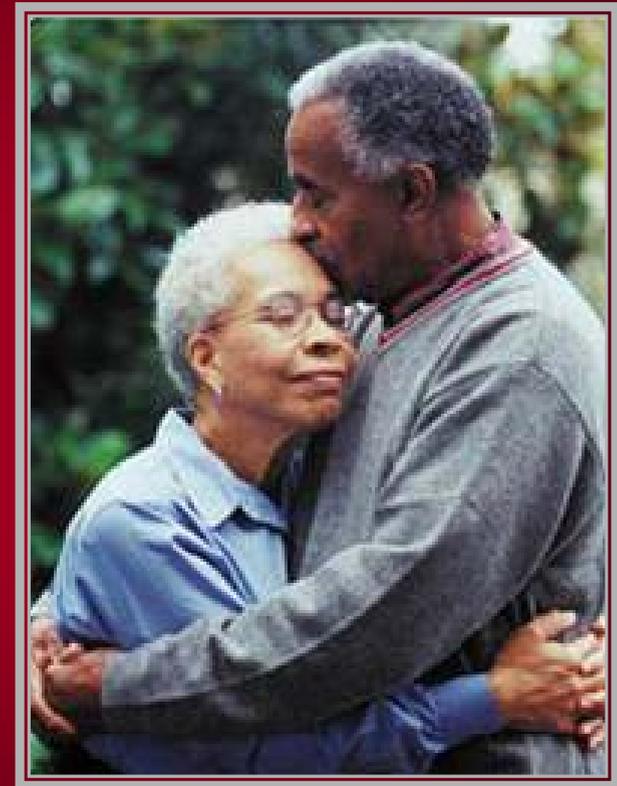

□ **Community**  
■ **Unknown**

▨ **Nursing Facility**

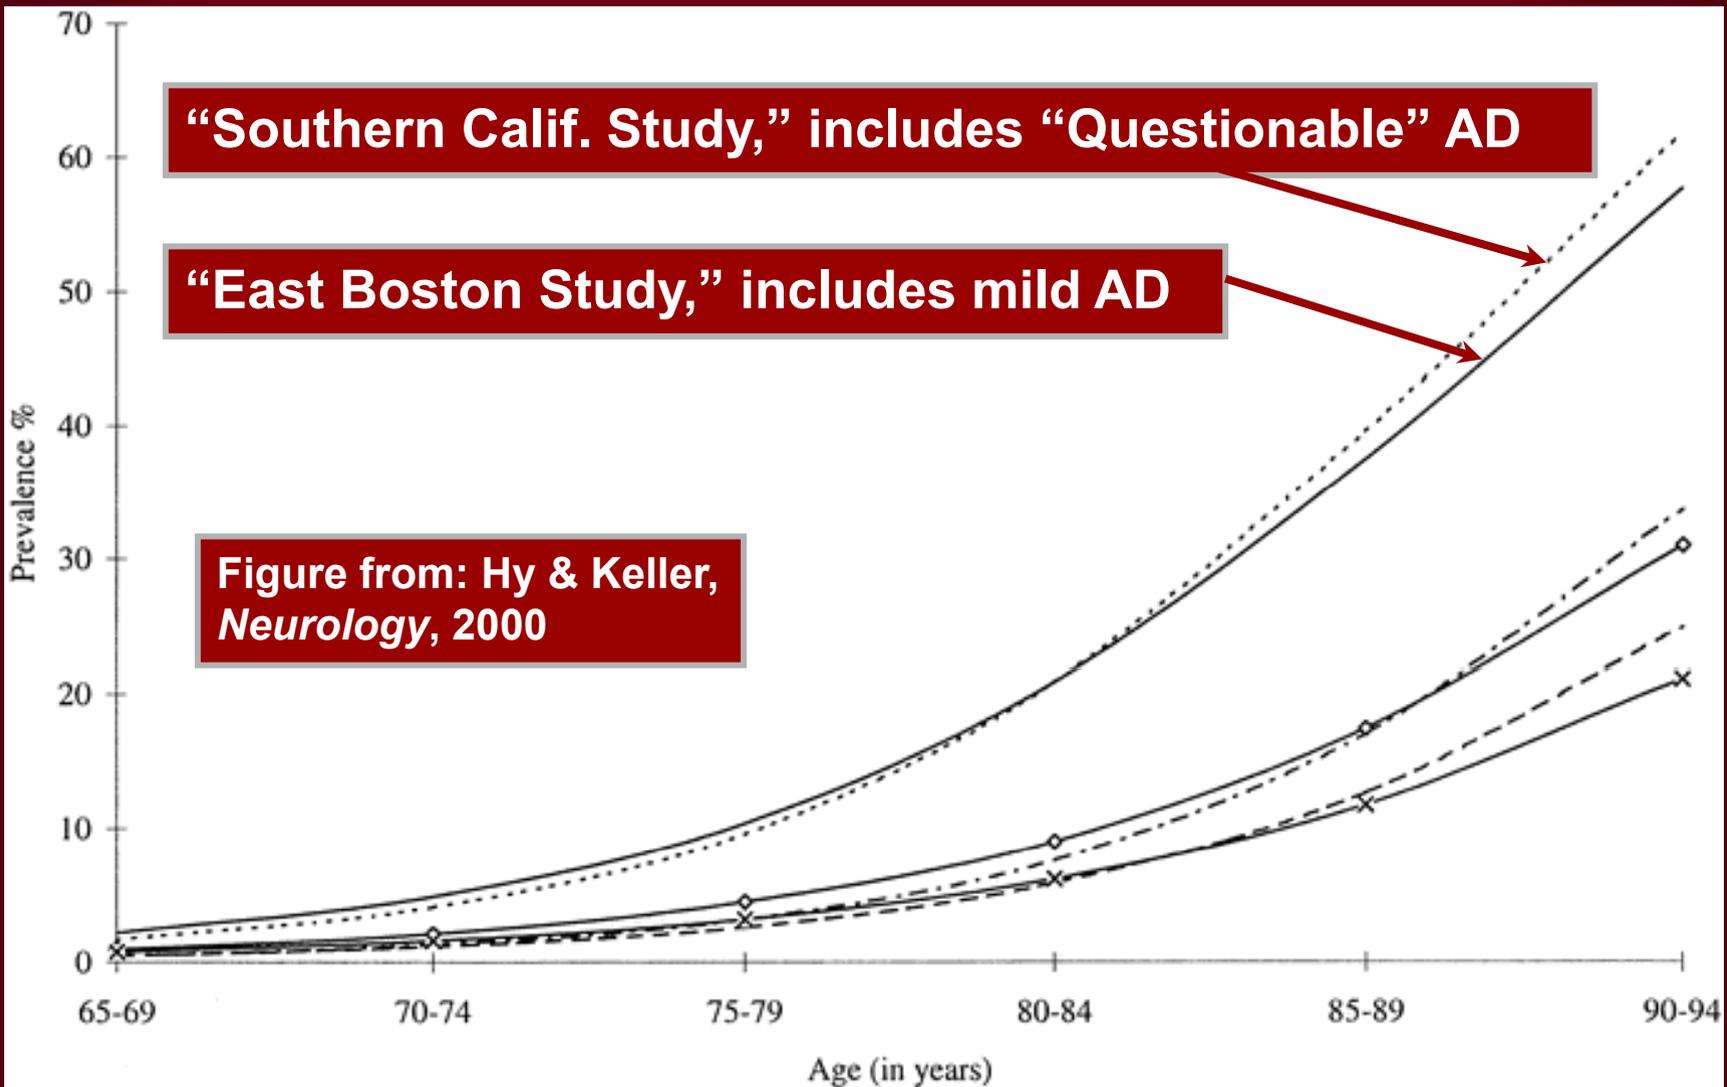

# Methods

---

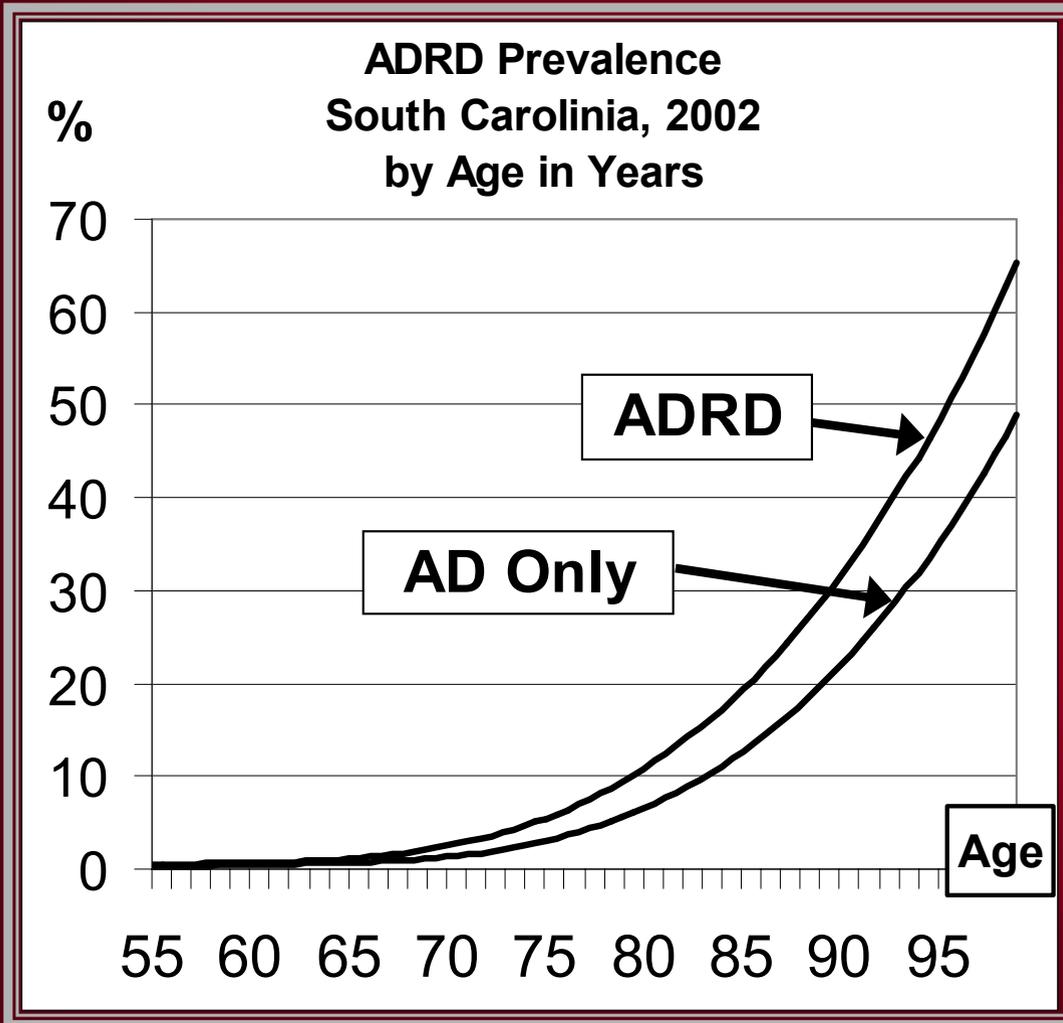

- Combine U.S. Census with Registry data.
- Estimate prevalence of AD and years lived after diagnosis.
- In total and for groups defined by age, gender, and race.

# Years from Diagnosis to Death

## Dementias with Medical Conditions -- Women

# Implications

---

- *There is strong evidence that blacks may live longer with dementing illnesses than do whites.*
- *There is some evidence of a black / white mortality crossover among men with vascular dementia.*
- *Years lived with these diseases also differs substantially between blacks and whites; the difference varies notably depending upon age at diagnosis.*

# Research Strengths

---

- Statewide population based registry
- Multiple data sources with a history of validity checks
- Recent data
- Ability to examine prevalence and survival for blacks and other groups

# Primary Research Challenges

---

Accuracy and consistency of physician diagnoses

Bias for group comparisons related to diagnosis patterns?

- Men / Women
- Whites / Blacks
- Younger Old / Older Old

# Policy Implications

---

- *Blacks generally live more years with dementing illnesses than do whites.*
- *This larger number of years lived requires more resources for long term care.*
- *Among those with dementia, blacks are more likely to live in the community.*
- *Caregiving needs associated with dementia may be greater for blacks.*

*Thank You!*
