## Health trends in Sweden 1992-2002

## Gender \& complex health problems

Marti G. Parker<br>Bettina Meinow

Pär Schön
Mats Thorslund

Karolinska Institut \& Stockholm University

## Average life expectancy at birth 1900-2006

## Life expectancy at age 30 by education 1986-2003

## SWEOLD

## Nationally representative interview survey

> Age 77+

1992
$\mathrm{n}=537$
Non-response 4.6 \%
Females 60.5 \%

2002
$\mathrm{n}=561$
Non-response 11.5 \%
Females 59.4 \%

## Health items 1992-2002

- No significant change in prevalence of
- S-R diabetes
- S-R myocardial infarction
- S-R stroke
- S-R ADL
- S-R IADL
- Vision impairment test
- Significant increases in prevalence of
(OR controlled for sex \& age)
- S-R fatigue (1.98)
- S-R hypertension (1.38)
- S-R joint pain (1.84)
- S-R hearing (1.76)
- S-R mobility (1.40)
- Physical function test (1.37)
- Lung function test (1.82)
- Cognitive test (1.48)

## Gender differences

adjustments for age and education

|  |  | 1992 | 2002 | $\begin{gathered} \text { 1992/2002 } \\ \text { Adj. OR } \end{gathered}$ | Sex $X$ period |
| :---: | :---: | :---: | :---: | :---: | :---: |
| SRH | Men <br> Women | 1.79** | 1.18 | $\begin{aligned} & 1.89^{* *} \\ & 1.19 \end{aligned}$ | \{0.085\} |
| Myocardial infarction | Men <br> Women | 1.38 | 0.43* | $\begin{aligned} & \text { 2.87* } \\ & 1.02 \end{aligned}$ | \{0.054\} |
| Joint pain | Men Women | 1.81*** | 1.87*** | $\begin{aligned} & 1.84^{* * *} \\ & 1.97^{* * *} \end{aligned}$ | n.s. |
| Mobility | Men <br> Women | 1.69** | 1.69*** | $\begin{aligned} & 1.44^{*} \\ & 1.47^{* *} \end{aligned}$ | n.s. |
| Lung function test | Men <br> Women | 1.65** | $2.54 * * *$ | $\begin{aligned} & 1.43 \\ & 2.42^{* * *} \end{aligned}$ | n.s. |
| ADL | Men <br> Women | 1.22 | 1.27 | $\begin{aligned} & 1.14 \\ & 1.16 \end{aligned}$ | n.s. |

## Complex health problems

- From the perspective of care provision
- 3 dimensions:
- Mobility
- Cognition/communication
- Symptoms \& disease

## Severe problems \% prevalence

| Domain | 1992 | 2002 |  |
| :--- | :---: | :---: | :---: |
| Diseases/symptoms | 20.7 | 31.7 | $* * *$ |
| Mobility | 20.6 | 26.9 | + |
| Cognition/communication | 26.3 | 32.4 | n.s. |

# 2+ severe problems = Complex health problems 

## Adjusted OR 1992/2002

No severe problem
0.60 ***

Severe problem in only one domain
1.34 *

Severe problems in 2 or 3 domains
1.37 *

Source: Meinow et al. 2006. Eur J Ageing

## Mortality and Complex health problems 19922002

- Overall 4 yr mortality risk decreased $20 \%$
- No significant decrease among people with no severe problems or in only one domain
- Very old men with complex health problems accounted for most of the decrease
- Source: Meinow PhD thesis 2008

## Conclusions

- Different health trends for men and women -"for different indicators
- Increasing complexity of care needs

## Questions

- Different trends for men and women
- Why?
- Gender roles?
- Smoking?
- Explaining the closing gender gap in mortality?
- Change in associations between health indicators?
- Increasing complexity of care needs
- Why?
- Implications?
- Continuous trend or temporal anomaly?
