"Average years of healthy life (without disabilities). Argentina 2002-2003."

Alvarez, M. - Carrizo, E. - Peláez, E. - González, L.

CONICET - National University of Córdoba, Argentina.

20th REVES Meeting. Havana, May 2010.

Introduction

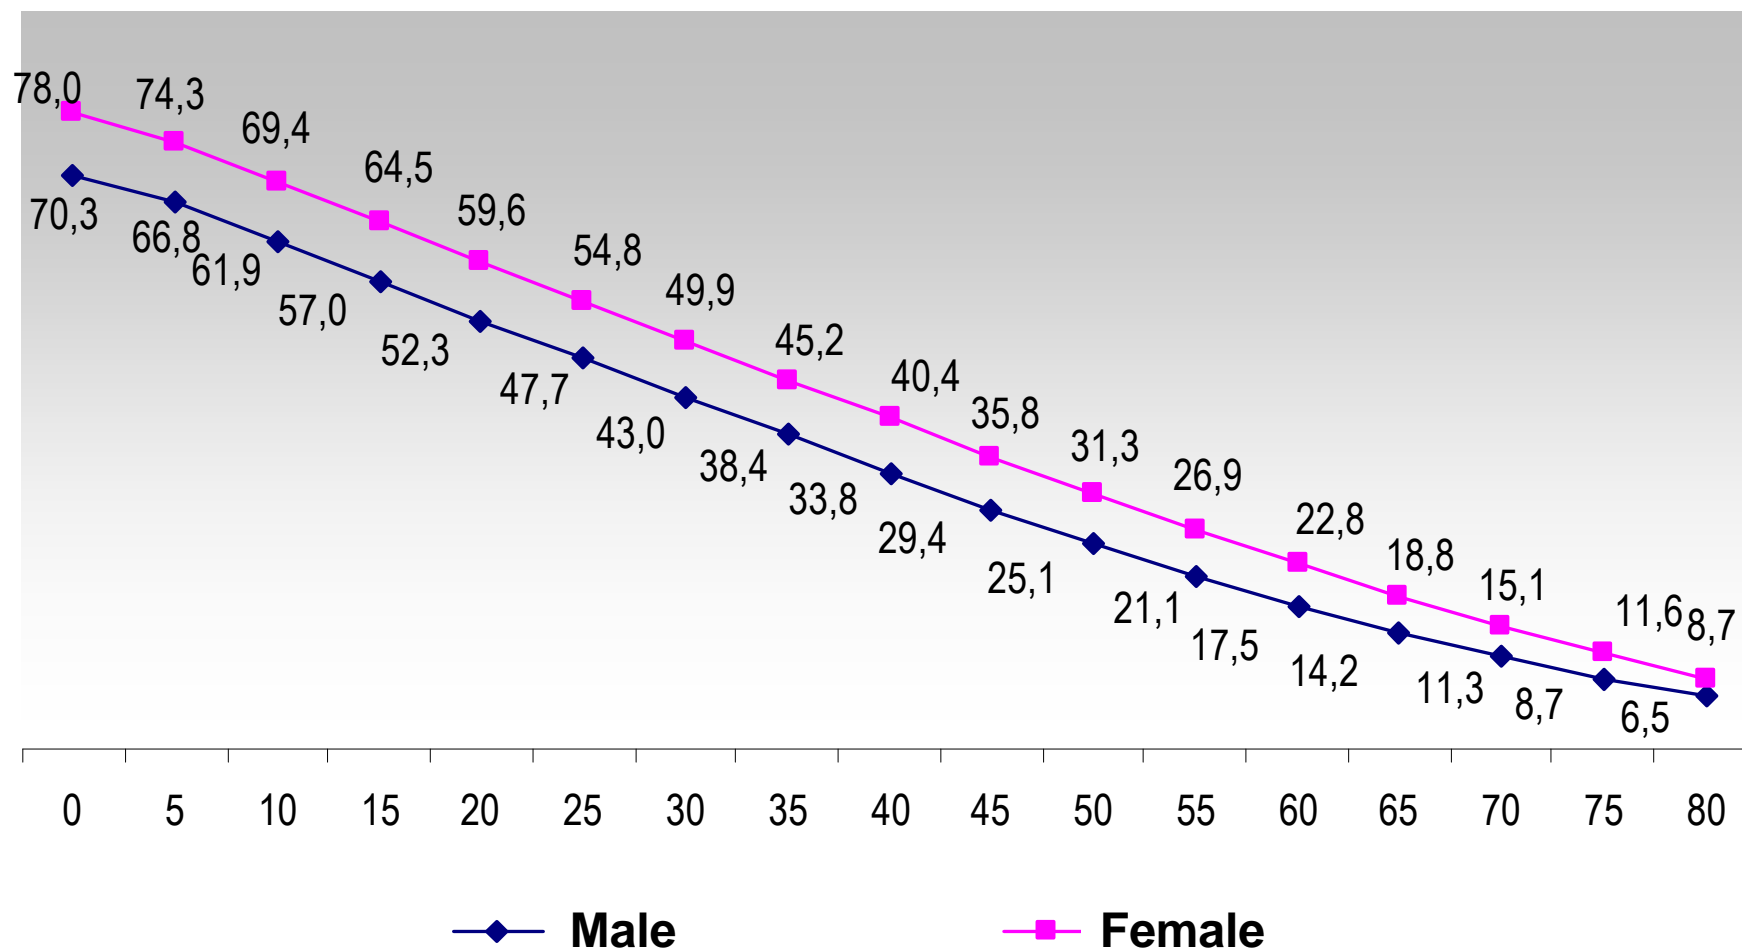

- Increasing of life expectancy: growing of elder people, prevalence of chronic diseases and disabilities.
- Does increasing of life expectancy correspond with a higher level of health?
- Objective: To calculate average years of life with or without disabilities in Argentina.

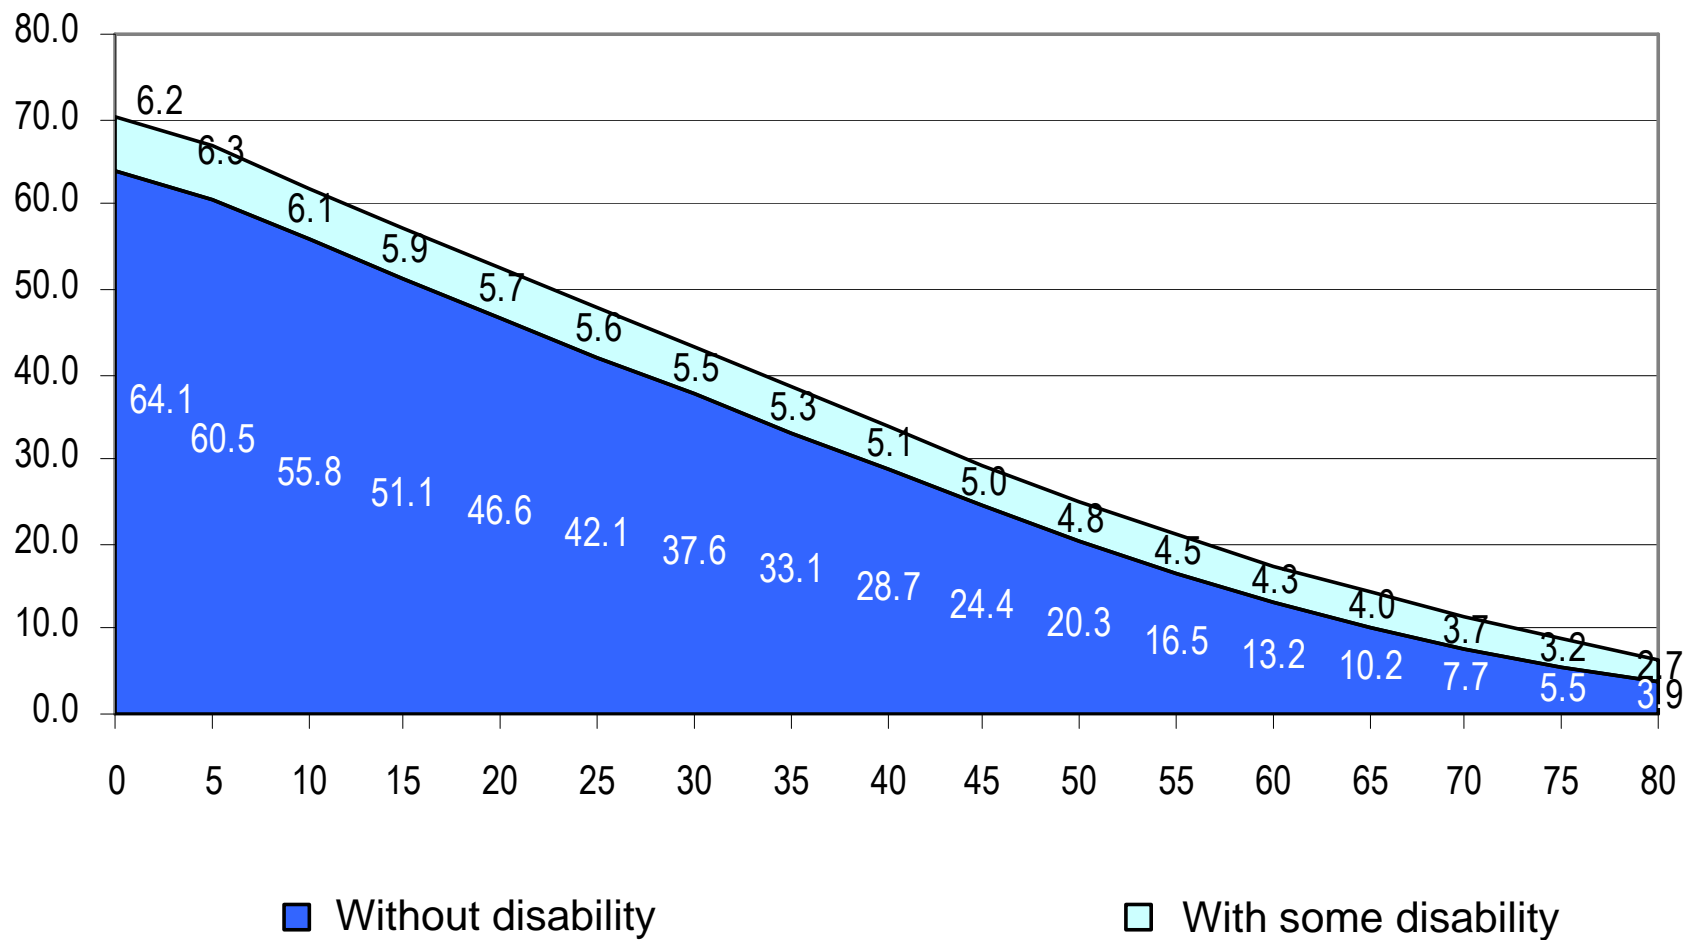

Methodology

- Source: National Disability Survey (ENDI) 2002-03.
- Specific disabilities: motor, mental, visual or others.
- Life tables from age and sex mortality rates (vital statistics 2001-2004).
- Life expectancy with or without disabilities from proportions of people with disabilities according to sex and age.

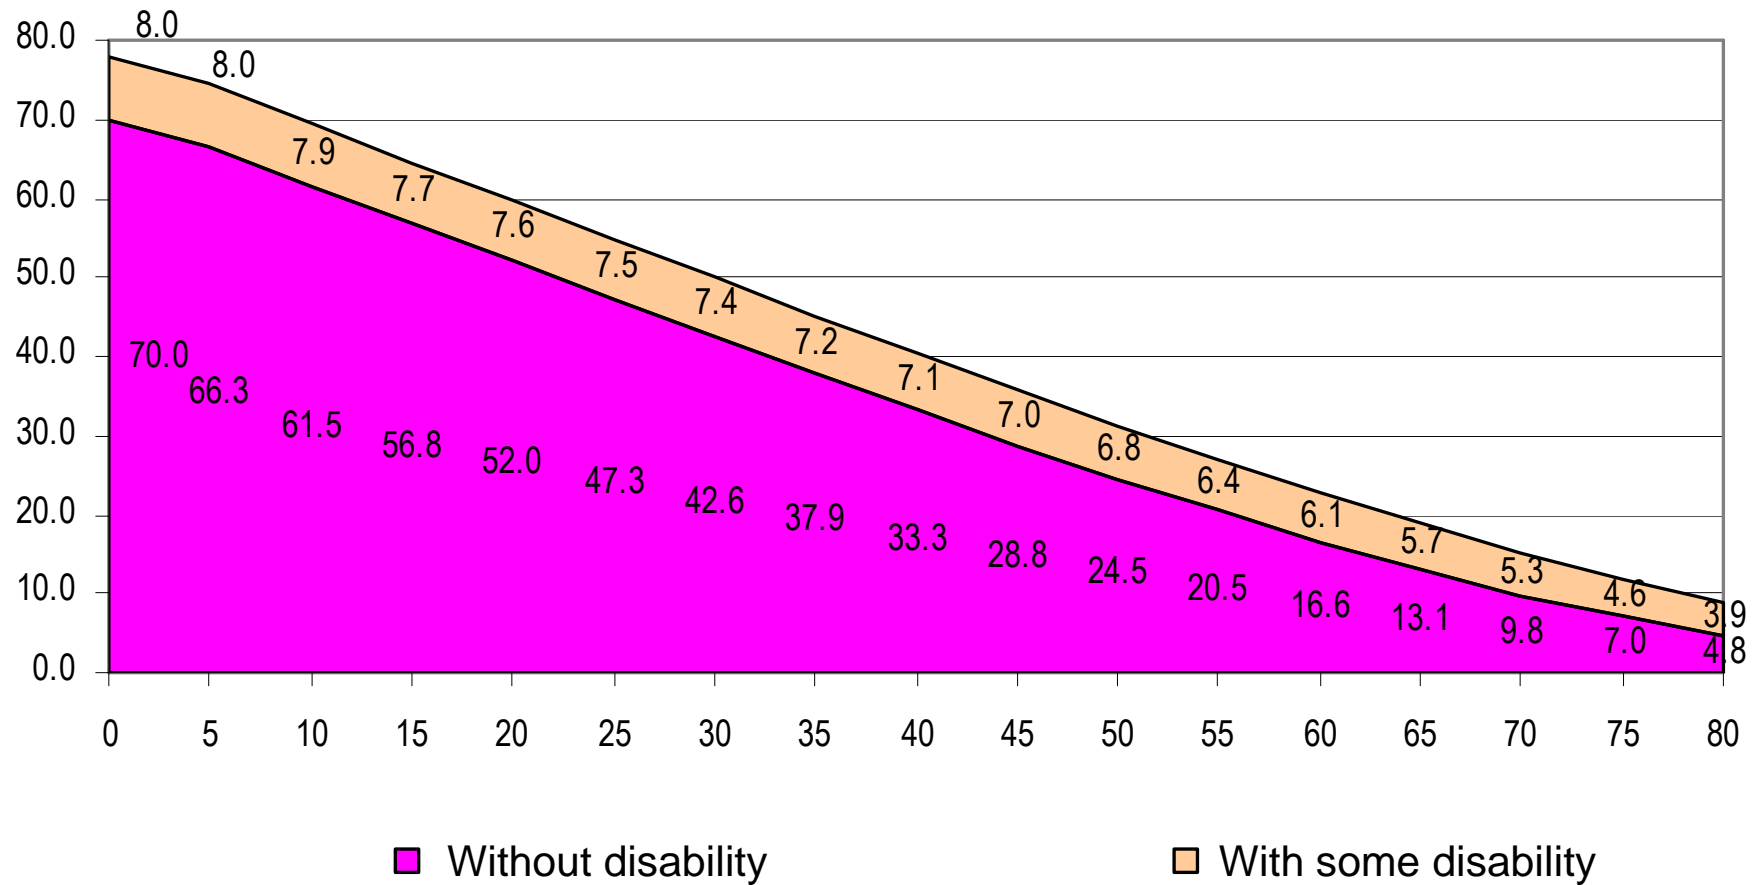

Life expectancy according to age and sex. Argentina, 2003.

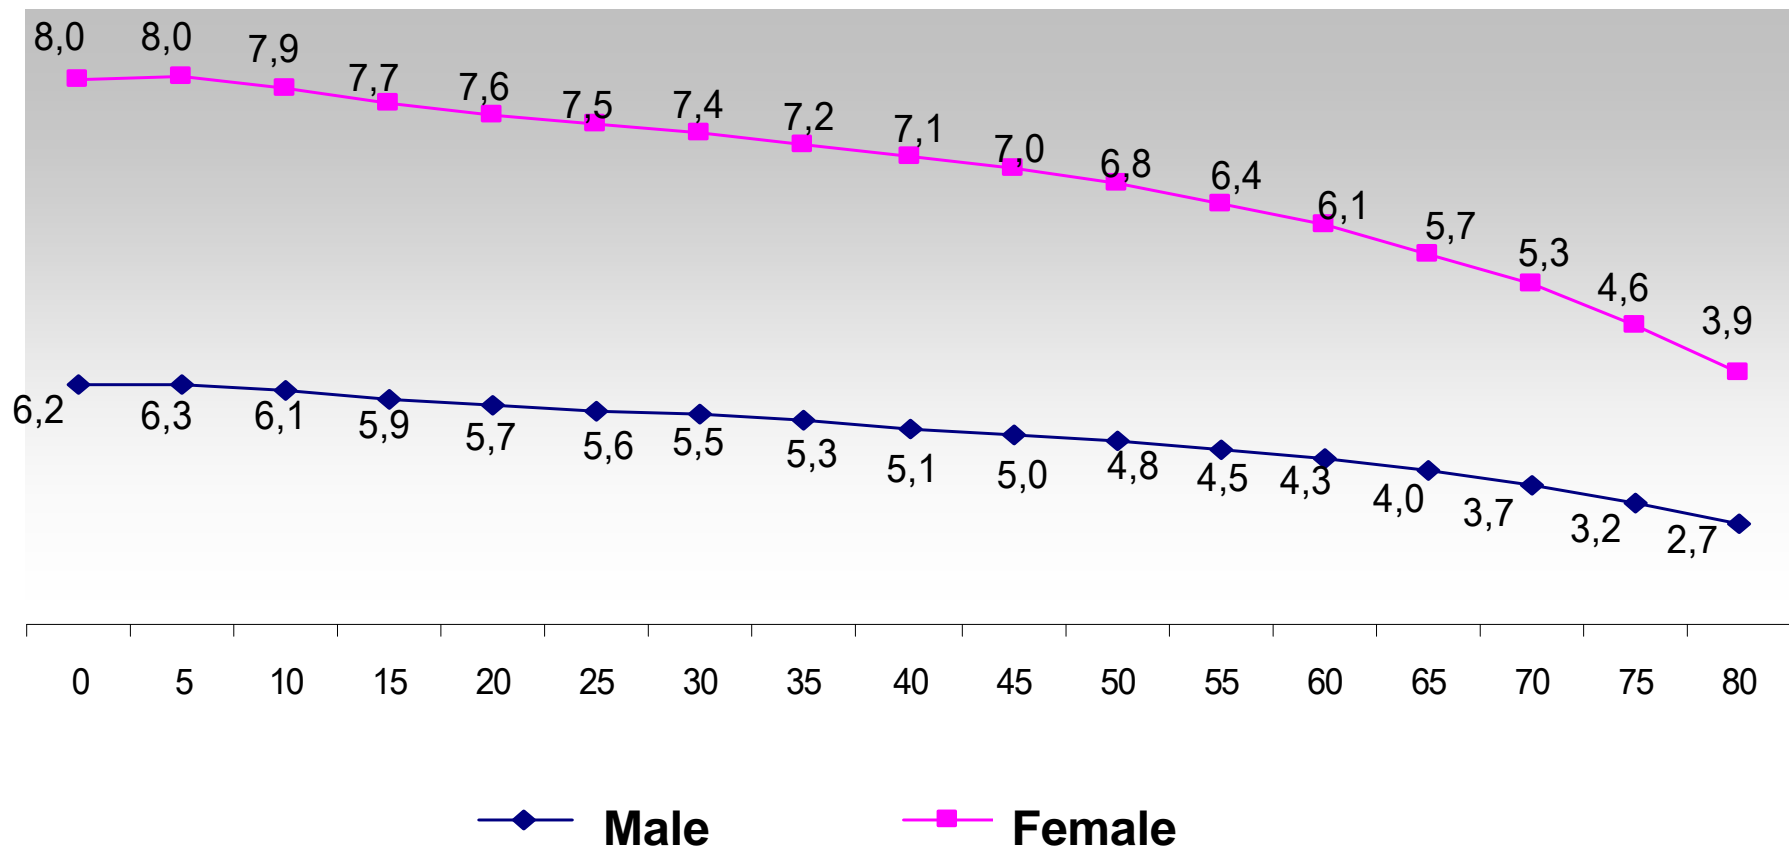

Male life expectancy without or with some disability according to age. Argentina, 2002-03.

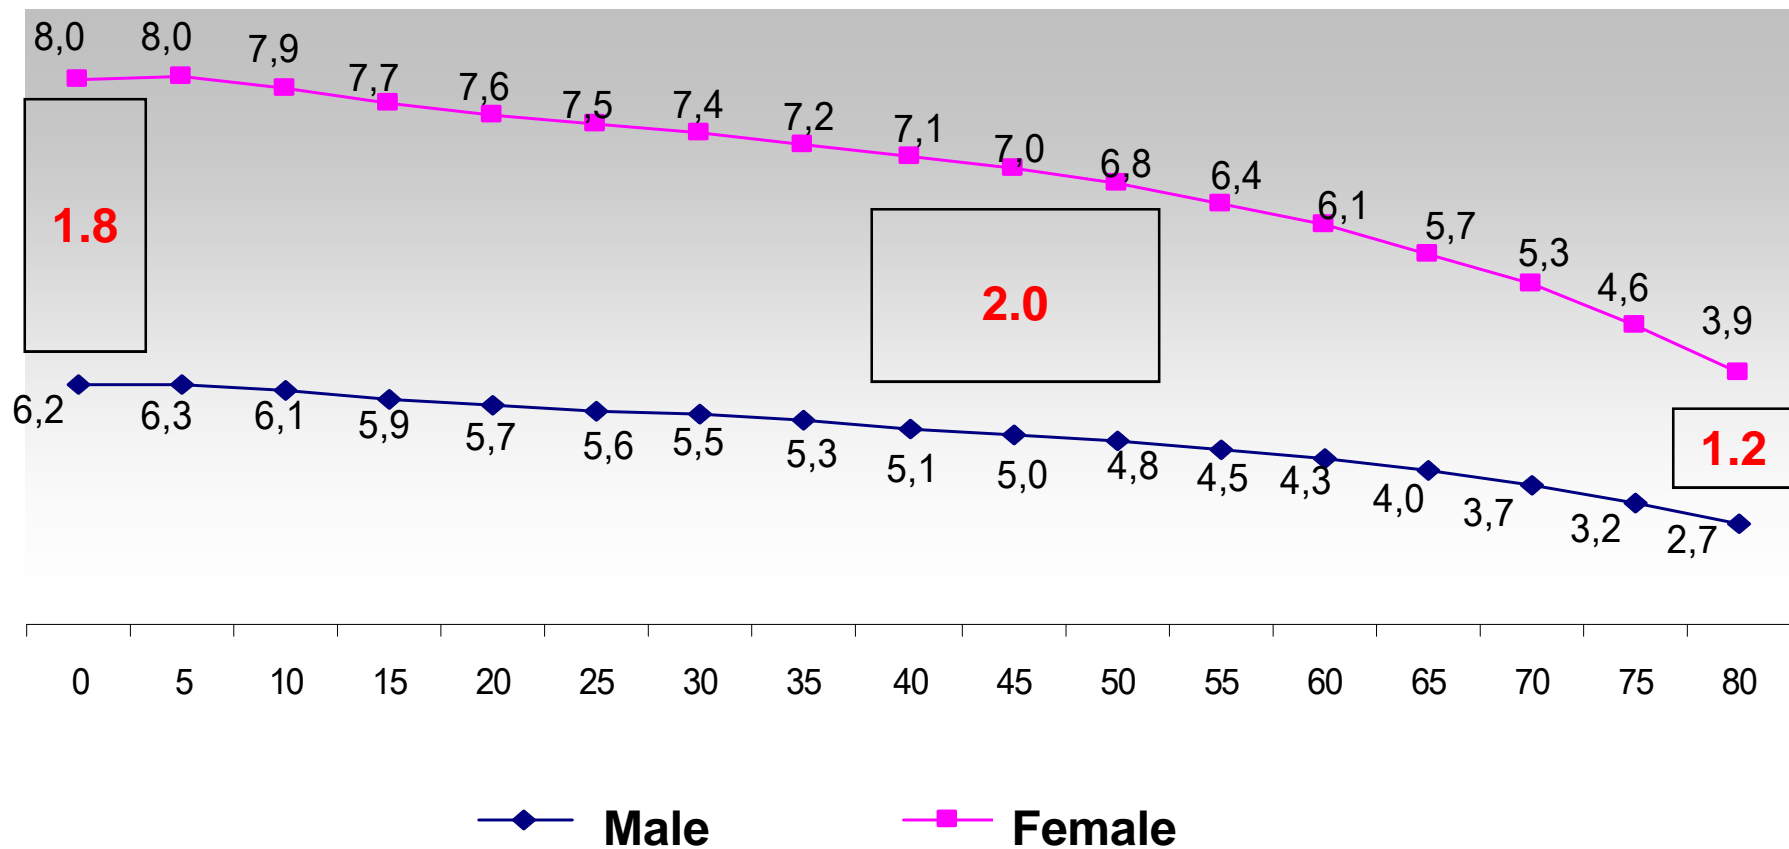

Female life expectancy without or with some disability according to age. Argentina, 2002-03.

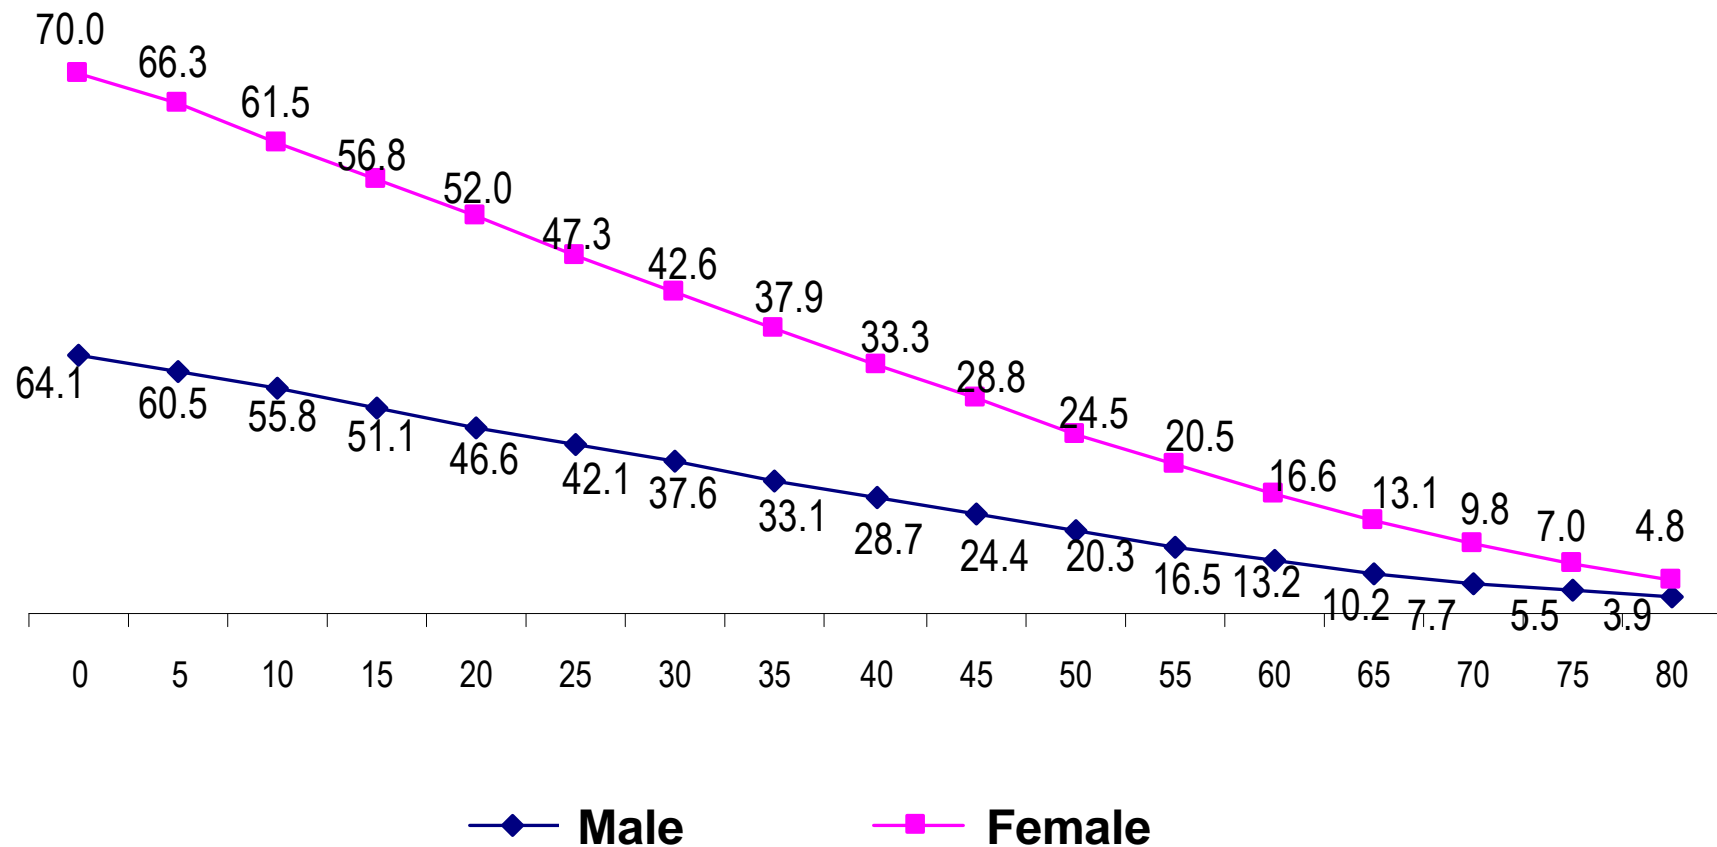

Life expectancy with one disability at least according to sex and age. Argentina, 2002-03.

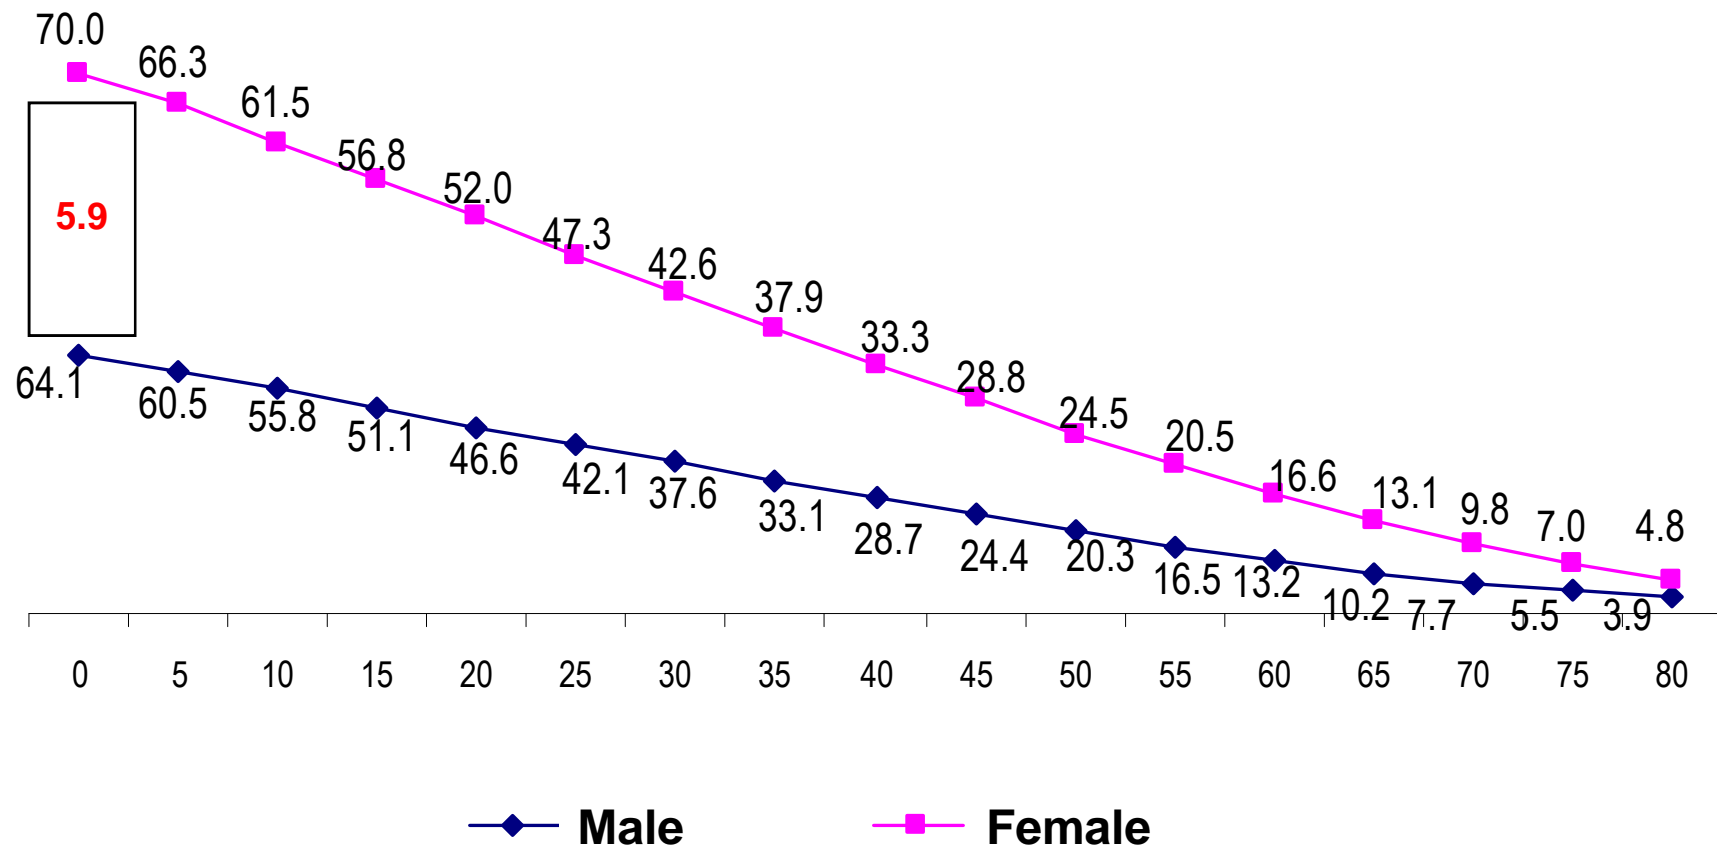

Life expectancy with one disability at least according to sex and age. Argentina, 2002-03.

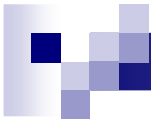

Life expectancy without disabilities according to sex and age. Argentina, 2002-03.

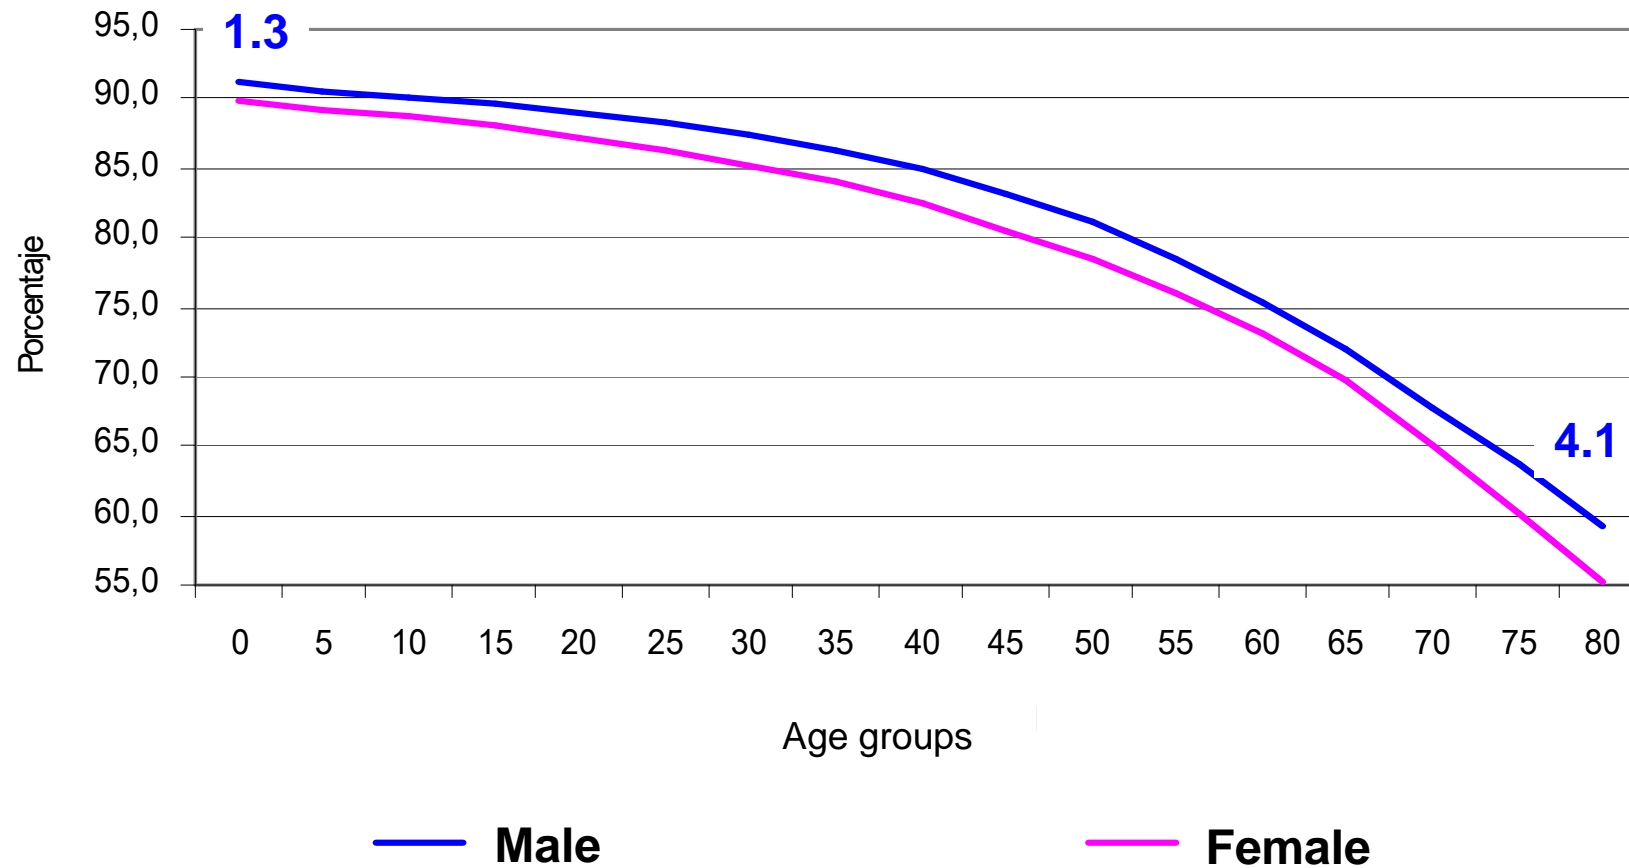

Life expectancy without disabilities according to sex and age. Argentina, 2002-03.

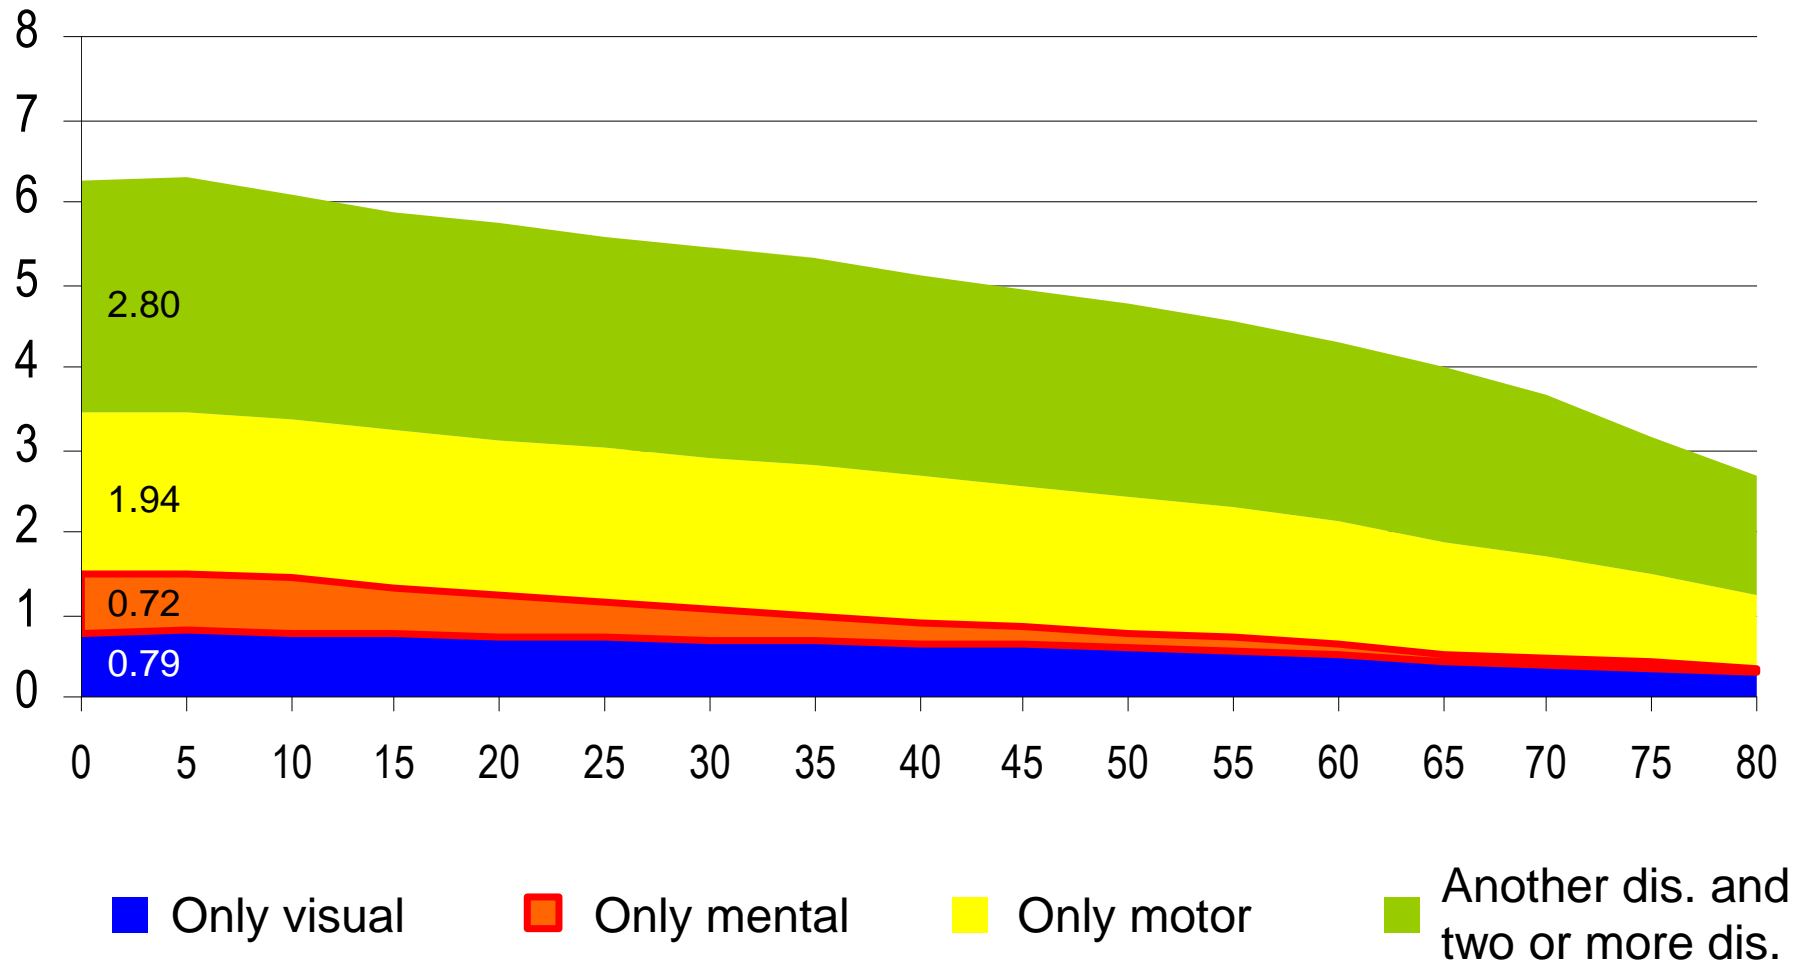

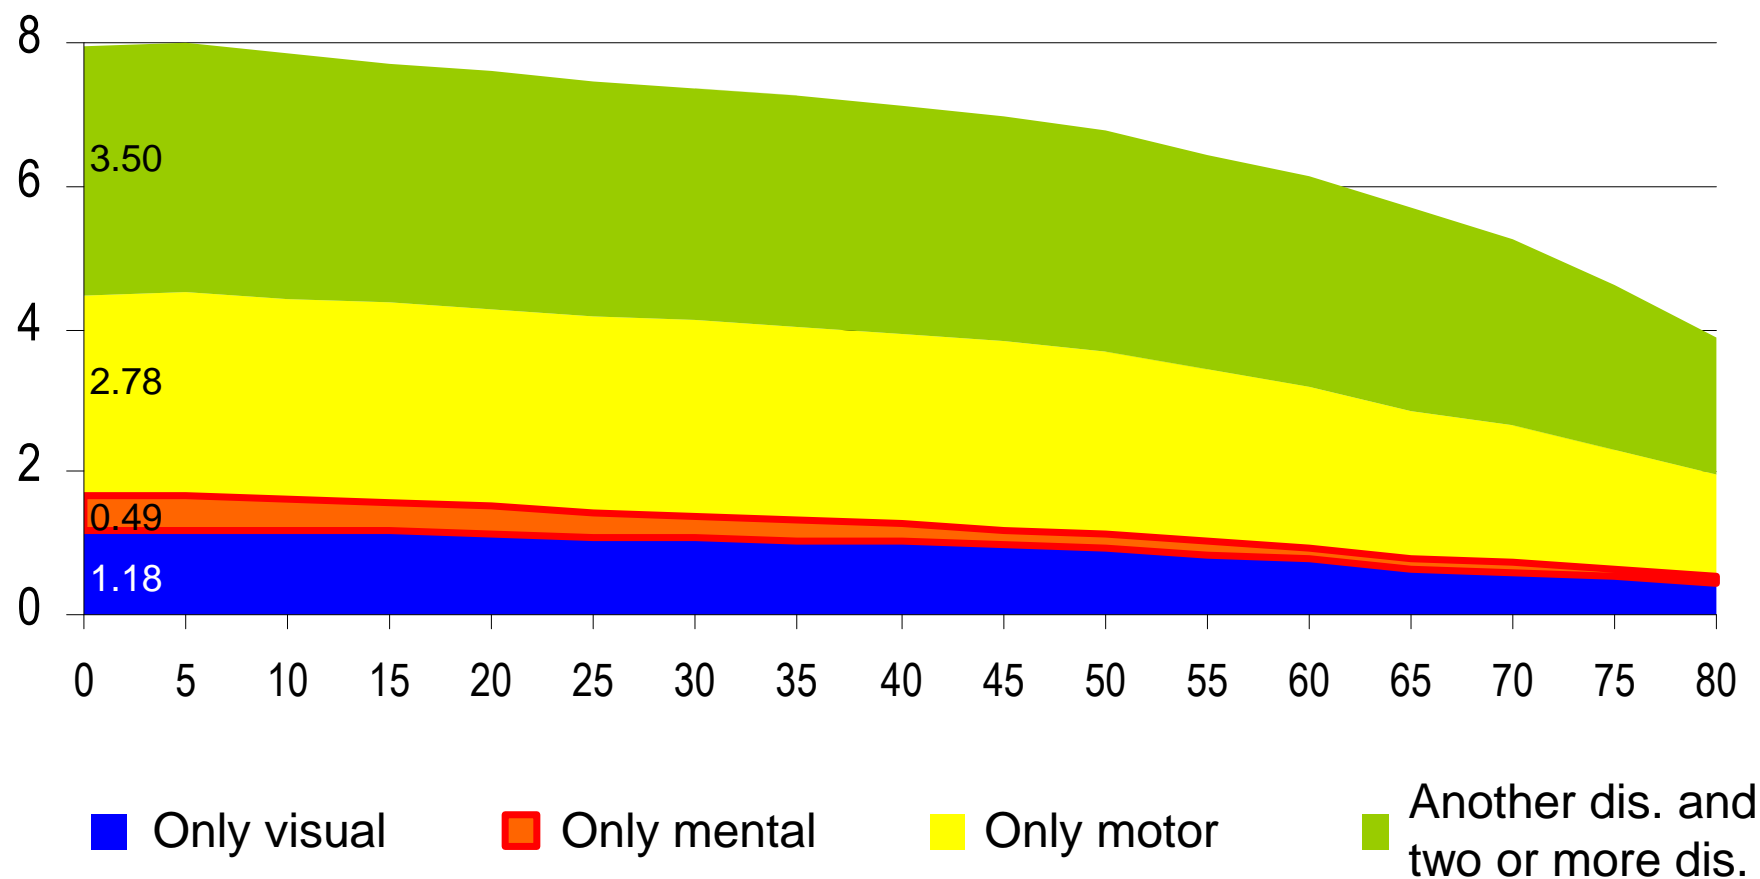

Healthy life years rates (%) according to sex and age. Argentina, 2002-03.

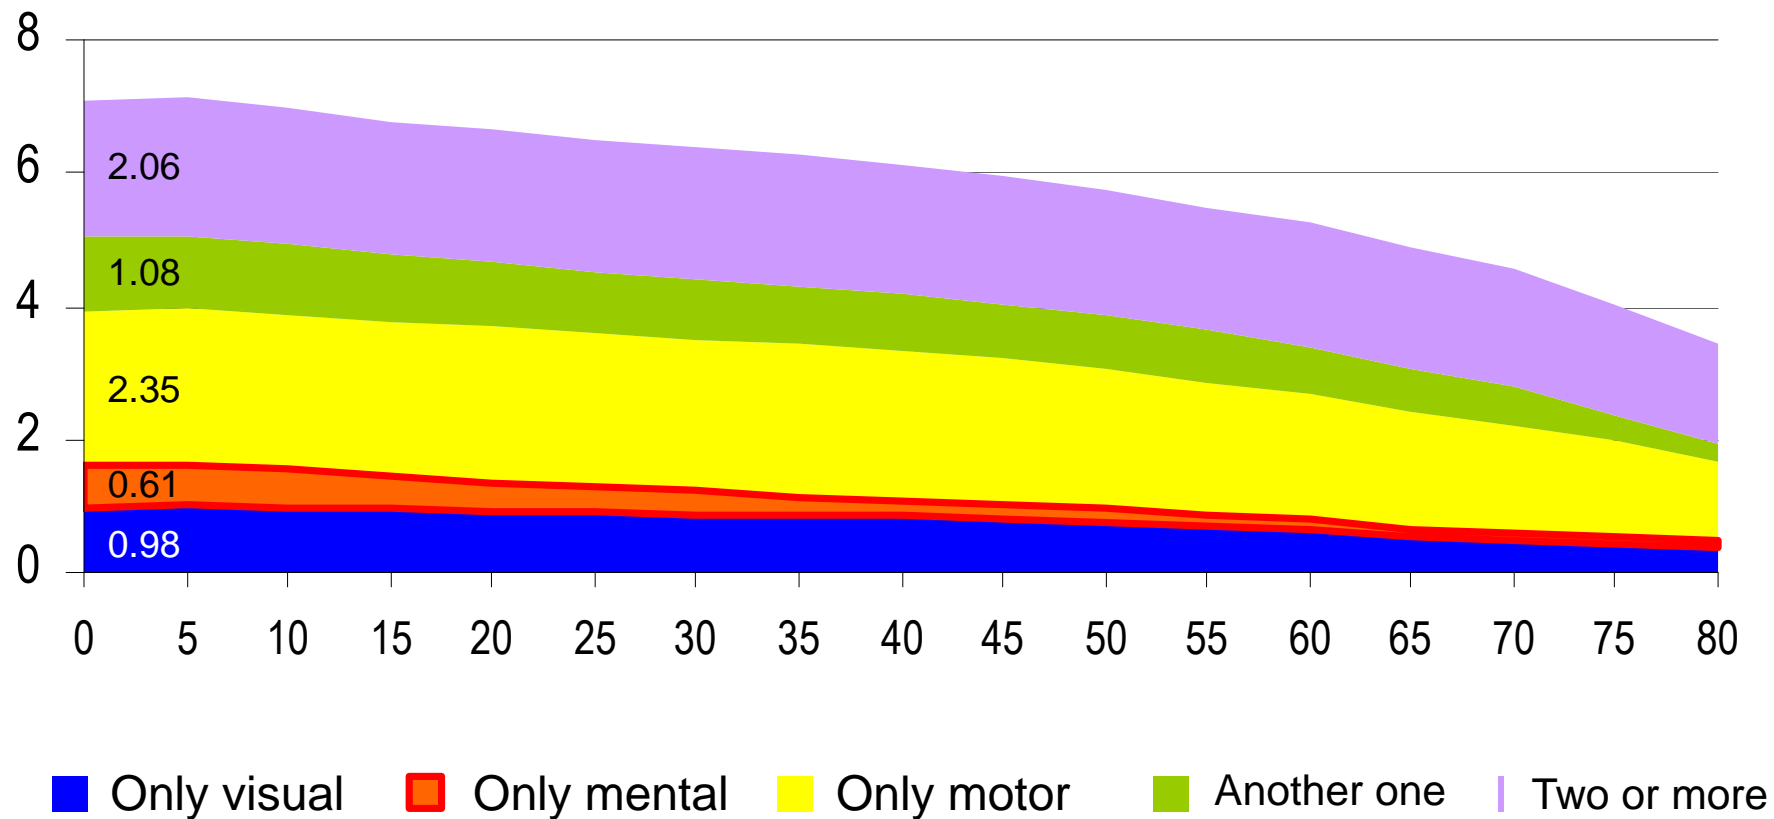

Male life expectancy with some disability according to type of disability and age. Argentina, 2002-03.

Female life expectancy with some disability according to type of disability and age. Argentina, 2002-03.

Life expectancy with some disability according to number, type of disability and age. Both sexes. Argentina, 2002-03.

Final Remarks

- Important evolution of conceptual framework and measures about disabilities.
- Different designs of surveys can produce not comparable data.
- Results of this survey are consistent with scientific literature.
- It is necessary to have comparable data series on disability in Argentina, which allow to calculate indicators in different provinces.
