

# Healthy ageing and wellbeing in Europe

I. Rocco<sup>1</sup>, G. Boccuzzo<sup>2</sup> and V. Egidi<sup>3</sup>

<sup>1</sup> *Neuroscience Institute, National Research Council, Italy*

<sup>2</sup> *University of Padua, Italy*

<sup>3</sup> *University of Rome “La Sapienza”, Italy*

**Vienna, 8-10 June 2016**

# Introduction

- By 2050, 29% of Europe's citizens will be 65 and older.
- The growing life expectancy can be considered a positive advancement only if the additional years are characterized by good health status and a satisfactory quality of life.
- Good health is an essential component of wellbeing and autonomy, and allows an individual to play an active role in his family and society.

# Objectives

Analysis of:

- Transversal and longitudinal determinants of healthy ageing and of wellbeing;
- The relationship between health and wellbeing;
- The differences across Countries.

# Data

- Survey of Health, Ageing and Retirement in Europe (**SHARE**): fifth wave (2013) linked with the longitudinal survey SHARELIFE (2008-09).
- **Sample:** 7.459 respondents to the two considered surveys who are **at least 65 years old** and live in: Austria, Belgium, Czech Republic, Denmark, France, Germany, Italy, Netherlands, Spain, Sweden or Switzerland.

# Wellbeing

## Complex concept

1. Subjective factor;
2. It considers all aspects of a person's life;
3. Positive concept, not the absence of negative aspects/events.

## The measure

Wellbeing was assessed using a Confirmative Factor Analysis (CFA) on the 12 items of the **CASP-12** (**C**ontrol, **A**utonomy, **S**elf-realization and **P**leasure) quality of life scale.

*12 dummies:*  $\left\{ \begin{array}{l} 1 \text{ if maximum score (4) on that item} \\ 0 \text{ otherwise} \end{array} \right.$

# Healthy Ageing

Maintaining autonomy and independence for older people is a key goal in the policy framework for active ageing.

## The Measure

CFA on the following variables:

- Number of **chronic diseases**;
- Number of difficulties in **ADLs**;
- Number of difficulties in **IADLs**;
- Times in **hospital** in the last 12 months;
- Number of **mobility** limitations;
- **Drugs** consumption.

# Standardized (0-1) factor means of Good health and Wellbeing

# Standardized (0-1) factor means of Good health and Wellbeing

# Conceptual Model

# Conceptual Model

# Childhood

- **Socio-economic conditions in childhood**
  - Occupation of the breadwinner;
  - Rooms per person;
  - Books in the family home;
  - Facilities in the accomodation.
- **Ability at 10 years**  
in Mathematics and Reading.
- **Traumatic events**  
(Being placed in an orphanage; Being fostered by another family; Parents drink heavily; Parents with mental health problems).

# Childhood: some descriptive results

Odds ratio of **good health** (above the third quartile) in old age related to:

<b>Per-capita rooms</b>	<b>OR</b>	<b>95% C.I.</b>	
(0.5 -1] vs $\leq 0.5$	1.58	1.40	1.79
>1 vs $\leq 0.5$	1.68	1.43	1.98

Odds ratio of **wellbeing** (above the third quartile) in old age related to:

<b>Per-capita rooms</b>	<b>OR</b>	<b>95% C.I.</b>	
(0.5 -1] vs $\leq 0.5$	1.55	1.37	1.77
>1 vs $\leq 0.5$	1.69	1.42	1.99

# Childhood: some descriptive results

Odds ratio of **good health** (above the third quartile) in old age related to:

<b>Per-capita rooms</b>	<b>OR</b>	<b>95% C.I.</b>	
(0.5 -1] vs ≤0.5	1.58	1.40	1.79
>1 vs ≤0.5	1.68	1.43	1.98

<b>Ability in childhood</b>	<b>OR</b>	<b>95% C.I.</b>	
Above average vs Average/Below average	1.30	1.15	1.47

Odds ratio of **wellbeing** (above the third quartile) in old age related to:

<b>Per-capita rooms</b>	<b>OR</b>	<b>95% C.I.</b>	
(0.5 -1] vs ≤0.5	1.55	1.37	1.77
>1 vs ≤0.5	1.69	1.42	1.99

<b>Ability in childhood</b>	<b>OR</b>	<b>95% C.I.</b>	
Above average vs Average/Below average	1.33	1.18	1.51

# Childhood: some descriptive results

Odds ratio of **good health** (above the third quartile) in old age related to:

<b>Per-capita rooms</b>	<b>OR</b>	<b>95% C.I.</b>	
(0.5 -1] vs ≤0.5	1.58	1.40	1.79
>1 vs ≤0.5	1.68	1.43	1.98

<b>Ability in childhood</b>	<b>OR</b>	<b>95% C.I.</b>	
Above average vs Average/Below average	1.30	1.15	1.47

<b>Traumatic events</b>	<b>OR</b>	<b>95% C.I.</b>	
No vs Yes	1.39	1.18	1.65

Odds ratio of **wellbeing** (above the third quartile) in old age related to:

<b>Per-capita rooms</b>	<b>OR</b>	<b>95% C.I.</b>	
(0.5 -1] vs ≤0.5	1.55	1.37	1.77
>1 vs ≤0.5	1.69	1.42	1.99

<b>Ability in childhood</b>	<b>OR</b>	<b>95% C.I.</b>	
Above average vs Average/Below average	1.33	1.18	1.51

<b>Traumatic events</b>	<b>OR</b>	<b>95% C.I.</b>	
No vs Yes	0.99	0.84	1.17

# Adulthood

- **Household economic difficulties in:**
  - Buying grocery;
  - Going on holiday;
  - Paying an unexpected expense;
  - Buying clothes if needed;
  - Buying shoes if needed;
  - Covering heating costs;
  - Covering visits to dentist;
  - Replacing glasses if needed.
- **Occupational level** of the job held for the longest time.
- **Traumatic event:** Death of a son/daughter.

# Adulthood: some descriptive results

Correlation coefficient between the factor **good health** in old age and:

<b>Economic difficulties</b>	$r = -0.217^{**}$
------------------------------	-------------------

Correlation coefficient between the factor **wellbeing** in old age and:

<b>Economic difficulties</b>	$r = -0.298^{**}$
------------------------------	-------------------

# Adulthood: some descriptive results

Correlation coefficient between the factor **good health** in old age and:

<b>Economic difficulties</b>	$r = -0.217^{**}$
------------------------------	-------------------

Correlation coefficient between the factor **wellbeing** in old age and:

<b>Economic difficulties</b>	$r = -0.298^{**}$
------------------------------	-------------------

Odds ratio of **good health** (above the third quartile) in old age related to:

<b>Occupational level</b>	<b>OR</b>	<b>95% C.I.</b>	
High vs Medium/Low	1.93	1.72	2.17

Odds ratio of **wellbeing** (above the third quartile) in old age related to:

<b>Occupational level</b>	<b>OR</b>	<b>95% C.I.</b>	
High vs Medium/Low	1.58	1.40	1.78

# Adulthood: some descriptive results

Correlation coefficient between the factor **good health** in old age and:

<b>Economic difficulties</b>	$r = -0.217^{**}$

No vs Yes	1.54	1.25	1.90

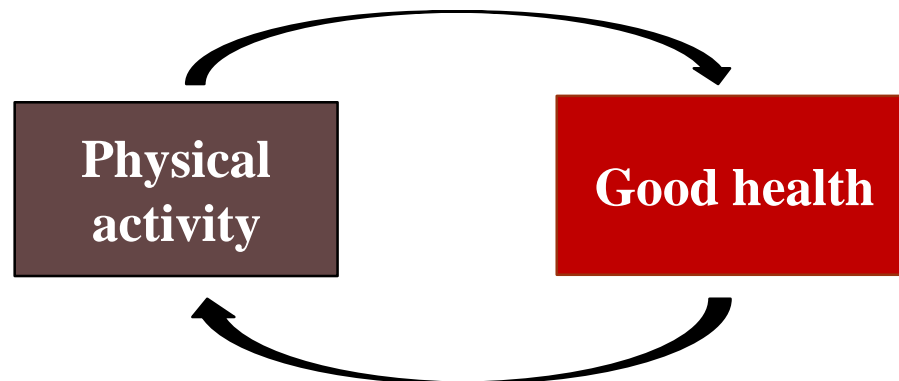

<b>Death of a son/daughter</b>	<b>OR</b>	<b>95% C.I.</b>	
No vs Yes	1.35	1.09	1.67

# Health behaviours

- Smoking
- Alcohol consumption
- Physical activity
- BMI

**Problem: Direction of effects**

*Example:*

# Multivariate model

## **Structural Equation Models (SEMs)**

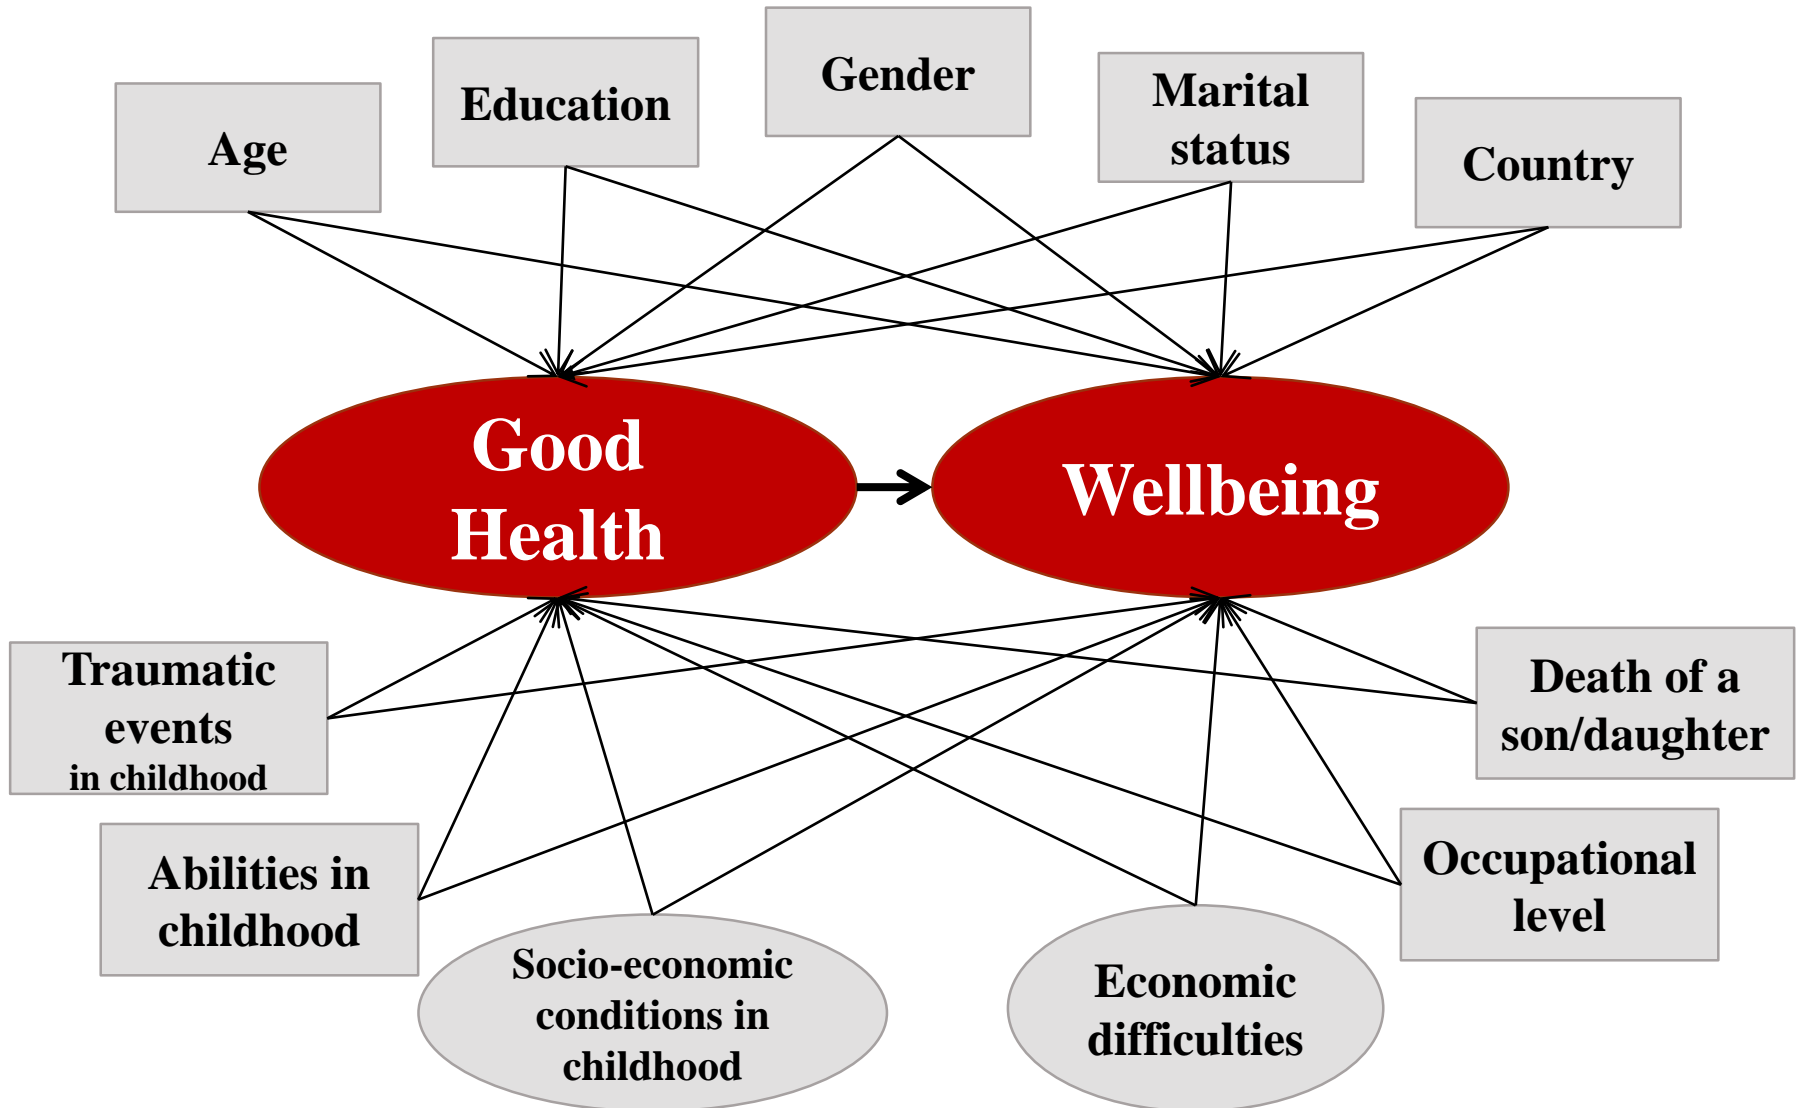

### **What is SEMs?**

Confirmatory models consisting of a measurement model (which relates the latent variables with those observed) and a structural model (which describes the relationships between the latent variables).

### **Why SEMs?**

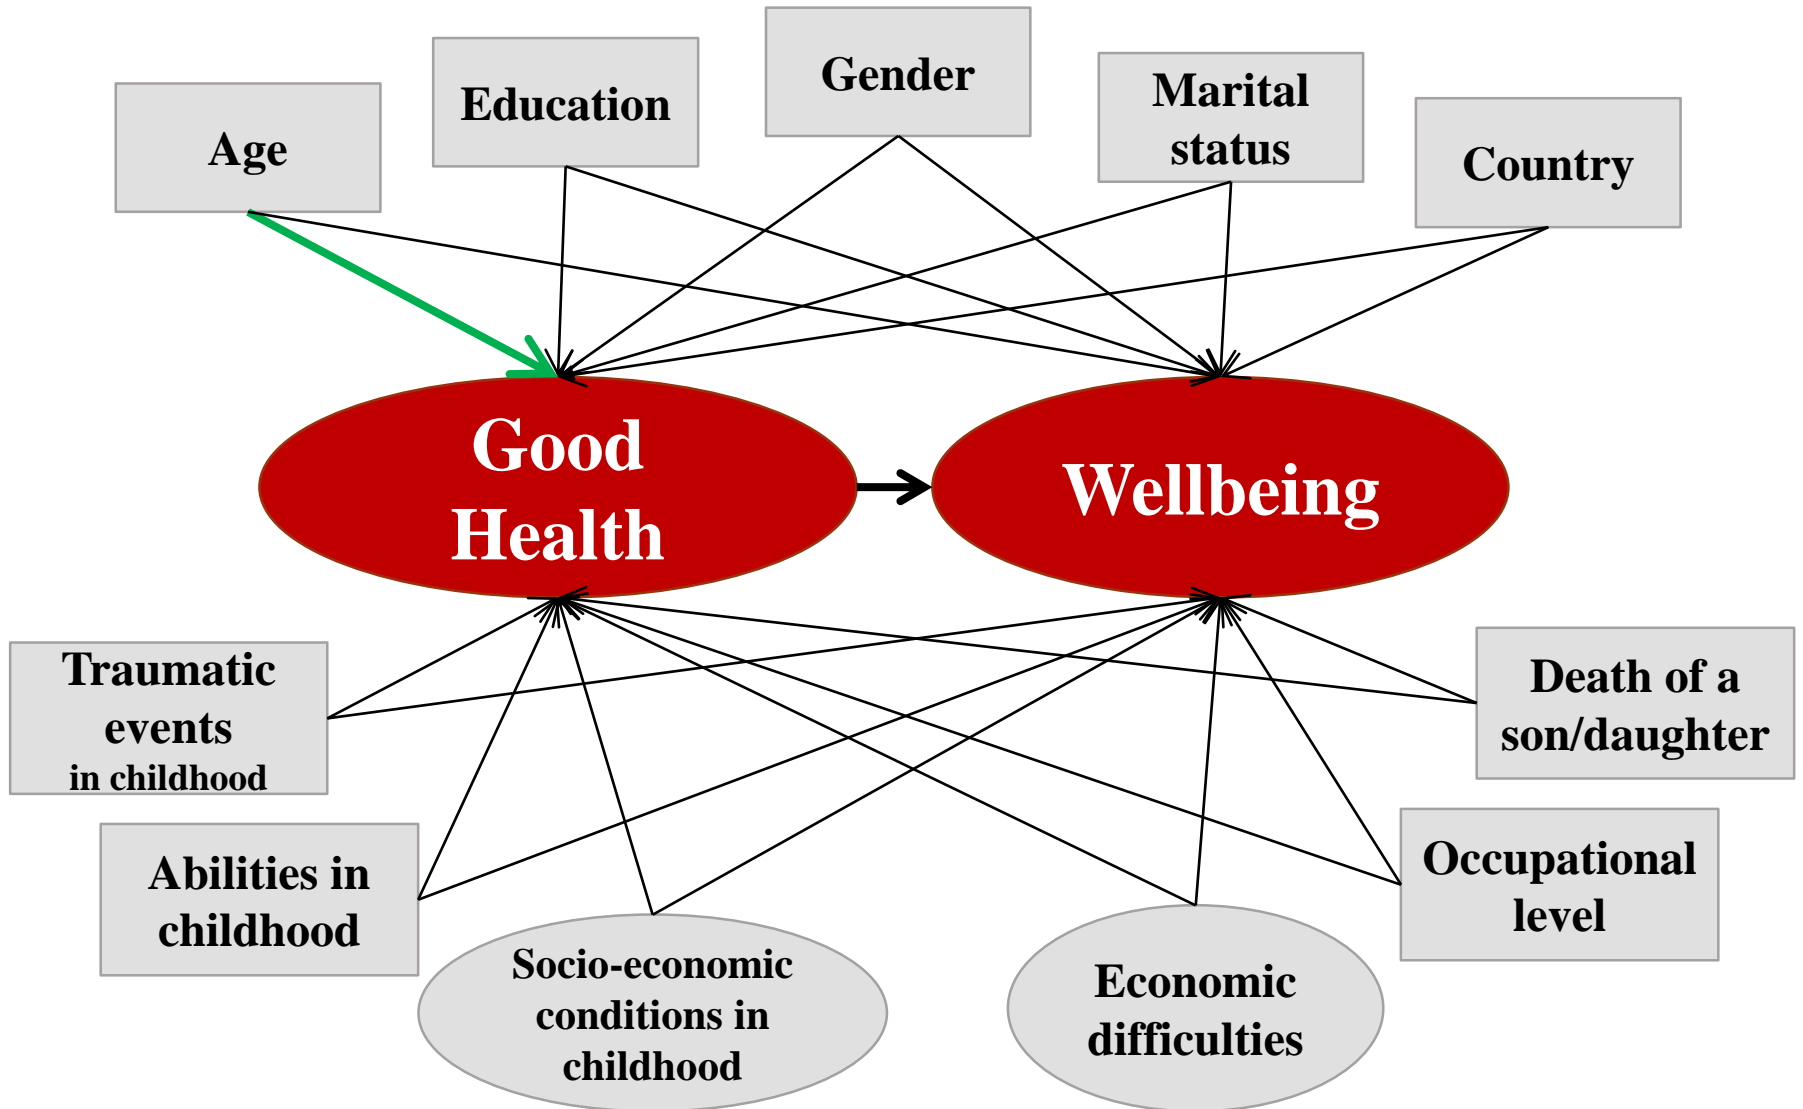

Direct and Indirect effects can be estimated.

# Conclusion

- As expected, good health has a strong effect on wellbeing.
- Importance of indirect effects on wellbeing, that accentuate the total effect.
- Health in old age and, even more wellbeing, are closely linked to the conditions experienced during childhood and to the human experience accumulated over a lifetime.
- Evidence of country disparities, especially in wellbeing.

*Thank you*
